A Conceptual Approach

Solution Manual

A 3D technical drawing of a rectangular duct. The main part of the duct is a rectangular prism with a semi-circular bend on one of its long sides. Dimensions are indicated with arrows and labels: 'H' for height, 'W' for width, and 'R' for the radius of the bend. A smaller, separate 3D diagram shows a rectangular prism with dimensions 'L', 'W', and 'H'.

Geological Storage of CO₂ in Deep Saline Formations Auli Niemi, Jacob Bear, Jacob Bensabat, 2017-02-24 This book offers readers a comprehensive overview and an in depth understanding of suitable methods for quantifying and characterizing saline aquifers for the geological storage of CO₂ It begins with a general overview of the methodology and the processes that take place when CO₂ is injected and stored in deep saline water containing formations It subsequently presents mathematical and numerical models used for predicting the consequences of CO₂ injection This book provides descriptions of relevant experimental methods from laboratory experiments to field scale site characterization and techniques for monitoring spreading of the injected CO₂ within the formation Experiences from a number of important field injection projects are reviewed as are those from CO₂ natural analog sites Lastly the book presents relevant risk management methods Geological storage of CO₂ is widely considered to be a key technology capable of substantially reducing the amount of CO₂ released into the atmosphere thereby reducing the negative impacts of such releases on the global climate Around the world projects are already in full swing while others are now being initiated and executed to demonstrate the technology Deep saline formations are the geological formations considered to hold the highest storage potential due to their abundance worldwide To date however these formations have been relatively poorly characterized due to their low economic value Accordingly the processes involved in injecting and storing CO₂ in such formations still need to be better quantified and methods for characterizing modeling and monitoring this type of CO₂ storage in such formations must be rapidly developed and refined
