Active Processes and Otoacoustic Emissions in Hearing Geoffrey A. Manley, Richard R. Fay, Arthur N. Popper, 2007-12-20 Sounds that are actually produced by healthy ears allow researchers and clinicians to study hearing and cochlear function noninvasively in both animals and humans This book presents the first serious review of the biological basis of these otoacoustic emissions Active processes such as those in hair cells that produce emissions represent a burgeoning and important area of sensory research By providing a basis for understanding how and why otoacoustic emissions testing works through a basic understanding of general hearing processes this volume will also interest clinicians particularly otolaryngologists and audiologists

Optimizing the Diagnostic Power of Otoacoustic Emissions Using Theoretical Cochlear Mechanics Arturo Moleti, Renata Sisto, 2025-08-09 This book examines the diagnostic usefulness of otoacoustic emissions OAEs in the context of

theoretical cochlear mechanics OAEs have proven to be immensely useful for diagnostic purposes The phenomenology of hearing physiology and OAEs in particular is briefly summarized providing the necessary references to the literature State of the art linear and nonlinear mathematical models of the cochlea are discussed using fundamental concepts of fluid dynamics and mechanics of vibrating systems often exploiting the formal analogy between mechanical and electric linear systems In particular it is explained how the theoretical predictions about the OAE level phase and nonlinear I O functions allow one to design advanced acquisition and analysis tools that significantly improve the specificity and sensitivity of OAEs to hearing dysfunction and other important physiological effects Examples of diagnostic applications of OAEs in audiology neurology and space physiology are discussed with all of the information needed to develop an OAE experiment provided from instrument and acquisition setup to signal analysis and theoretical interpretation The book is targeted at graduate students and researchers in hearing science with at least a basic knowledge of classical physics calculus Fourier analysis and signal analysis
