The distinction between falsification and refutation in the demarcation problem of Karl Popper Nicolae Sfetcu,2019-03-07 Despite the criticism of Karl Popper s falsifiability theory for the demarcation between science and non science mainly pseudo science this criterion is still very useful and perfectly valid after it was perfected by Popper and his followers Moreover even in his original version considered by Lakatos as dogmatic Popper did not assert that this methodology is an absolute demarcation criterion a single counter example is not enough to falsify a theory a theory can legitimately be saved from falsification by introducing an auxiliary hypothesis Compared to Kuhn s theory of revolutions which he himself later dissociated from it transforming it into a theory of micro revolutions I consider that Popper s demarcation methodology along with the subsequent development proposed by him including the corroboration and the verisimilitude though imperfect is not only valid today but it is still the best demarcation methodology For argumentation I used the main works of Popper dealing with this issue and his main critics and supporters After a brief presentation of Karl Popper and an introduction to the demarcation problem and the falsification methodology I review the main criticisms and the arguments of his supporters emphasizing the idea that Popper has never put the sign of equality between falsification and rejection Finally I present my own conclusions on this issue Keywords Karl Popper falsifiability falsification demarcation problem pseudo science CONTENTS Abstract Introduction 1 The demarcation problem 2 Pseudoscience 3 Falsifiability 4 Falsification and refutation 5 Extension of falsifiability 6 Criticism of falsifiability 7 Support of falsifiability 8 The current trend Conclusions Bibliography Notes DOI 10 13140 RG 2 2 22522 54725
