International Public Health: Diseases, Programs, Systems and Policies Michael Merson, Robert E. Black, Anne Mills, 2006 In this text for graduate students in various disciplines who are studying international public health the author focuses on conditions in low and middle income countries occasionally making reference to high income countries He suggests approaches for fostering public health and discusses future challenges for health promotion and disease prevention around the world The text can also be used as a reference by those working in government agencies international health and development agencies and NGOs

Morbidity and Mortality Weekly Report , 1999 **Nano-Biofortification for Human and Environmental Health** Vishnu D. Rajput, Hassan El-Ramady, Sudhir K. Upadhyay, Tatiana Minkina, Bilal Ahmed, Saglara Mandzhieva, 2023-08-10 Nanotechnology has shown great potential to alleviate increasing pressure to meet food needs for our increasing human

population Novel agricultural innovations are required to enhance the health of edible crops and per unit area yield without impacting the associated environment in a negative way Recent advancements in nanotechnology based agricultural solutions have proven to help overcome the problems in agriculture that are associated with run off of essential fertilizers from agricultural soils low nutrient accumulation by crops as well as to control insects pests and seasonal biotic factors treatment of wastewater used for irrigation plant uptake of xenobiotics heavy metals pesticides industrial chemicals drugs and so on that may be present in contaminated soils Additionally the consumption of such food crops may result in malnourishment and plant mediated transfer of toxic substances among humans especially in underprivileged and rural populations Agents to stimulate plant growth include various types of nanomaterials such as carbon nanotubes metal and metal oxide nanoparticles Applications of particular nutrients or elements in crop plants can be shown to aid human nourishment either by directly inducing its uptake or indirectly through enhancing the intracellular levels of other associated elements that ultimately boost the synthesis of the desired nutrient in plants It is also important to consider the competence and fate of nanomaterials in soil ecosystems The entry route of nanomaterials into the environment includes both natural and anthropogenic sources In order to achieve sustainable and safe use of nanotechnological products in agriculture similar environmental conditions must be simulated on lab scale with the careful selection of organisms related to agriculture Thus emphasis should be placed on the judicious use of nano enabled products without compromising the sustainability of the environment and human health This comprehensive book highlights recent field research as well as contributions from academicians in the lab This book addresses the major aspects related to nanotechnology biofortification of crops and human and environmental health

Nutrition Across Reproductive, Maternal, Neonatal, Child, and Adolescent Health Care

Zohra S. Lassi, Rehana A. Salam, 2025-09-12 This book led by experienced academic nurses and epidemiologists involves an overview of the global nutrition epidemiology risk factors effective health and non health sector interventions success stories insights and work of nurse and allied health experts of the field stressing on nutrition as one of the top priorities for women and children living in low and middle income countries LMICs specially in disadvantaged and underserved areas The book focuses on nutritional epidemiology and transition in LMICs and interventions to improve nutrition across the continuum of care for equitable access at each stage reproductive maternal neonatal child and adolescent health RMNCAH care It also discusses the consequences of hidden hunger climate change and conflict on nutritional status of women and children and how best to integrate potentially effective cross cutting strategies to counter these emerging challenges It will appeal to nurses academics and public health practitioners but is also of interest to development partners NGOs Multilateral agencies and nutrition program implementers

Hidden Hunger Aya Hirata Kimura, 2013-02-19 For decades NGOs targeting world hunger focused on ensuring that adequate quantities of food were being sent to those in need In the 1990s the international food policy community turned its focus to the hidden hunger of micronutrient deficiencies a problem that resulted in two

scientific solutions fortification the addition of nutrients to processed foods and biofortification the modification of crops to produce more nutritious yields This hidden hunger was presented as a scientific problem to be solved by experts and scientifically engineered smart foods rather than through local knowledge which was deemed unscientific and hence irrelevant In Hidden Hunger Aya Hirata Kimura explores this recent emphasis on micronutrients and smart foods within the international development community and in particular how the voices of women were silenced despite their expertise in food purchasing and preparation Kimura grounds her analysis in case studies of attempts to enrich and market three basic foods rice wheat flour and baby food in Indonesia She shows the power of nutritionism and how its technical focus enhanced the power of corporations as a government partner while restricting public participation in the making of policy for public health and food She also analyzes the role of advertising to promote fortified foodstuffs and traces the history of Golden Rice a crop genetically engineered to alleviate vitamin A deficiencies Situating the recent turn to smart food in Indonesia and elsewhere as part of a long history of technical attempts to solve the Third World food problem Kimura deftly analyzes the intersection of scientific expertise market forces and gendered knowledge to illuminate how hidden hunger ultimately defined women as victims rather than as active agents
