Primitive Cartography:

History of Cartography Leo Bagrow, 2017-07-12 This illustrated work is intended to acquaint readers with the early maps produced in both Europe and the rest of the world and to tell us something of their development their makers and printers their varieties and characteristics The authors chief concern is with the appearance of maps they exclude any examination of their content or of scientific methods of mapmaking This book ends in the second half of the eighteenth century when craftsmanship was superseded by specialized science and the machine As a history of the evolution of the early map it is a stunning work of art and science This expanded second edition of Bagrow and Skelton s *History of Cartography* marks the reappearance of this seminal work after a hiatus of nearly a half century As a reprint project undertaken many years after the book last appeared finding suitable materials to work from proved to be no easy task Because of the wealth of monochrome and color plates the book could only be properly reproduced using the original materials Ultimately the authors were able to obtain materials from the original printer Scotchprints or contact films made directly from original plates thus allowing the work to preserve the beauty and clarity of the illustrations Old maps collated with other materials help us to elucidate the course of human history It was not until the eighteenth century however that maps were gradually stripped of their artistic decoration and transformed into plain specialist sources of information based upon measurement Maps are objects of historical artistic and cultural significance and thus collecting them seems to need no justification simply enjoyment

Cartography Matthew H. Edney, 2019-04-12 In his most ambitious work to date Edney questions the very concept of cartography to argue that this flawed ideal has hobbled the study of maps Susan Schulten author of A History of America in 100 Maps Over the past four decades the volumes published in the landmark History of Cartography series have both chronicled and encouraged scholarship about maps and mapping practices across time and space As the current director of the project that has produced these volumes Matthew H Edney has a unique vantage point for understanding what cartography has come to mean and include In this book Edney disavows the term cartography rejecting the notion that maps represent an undifferentiated category of objects for study Rather than treating maps as a single unified group he argues scholars need to take a processual approach that examines specific types of maps sea charts versus thematic maps for example in the context of the unique circumstances of their production circulation and consumption To illuminate this bold argument Edney chronicles precisely how the ideal of cartography that has developed in the West since 1800 has gone astray By exposing the flaws in this ideal his book challenges everyone who studies maps and mapping practices to reexamine their approach to the topic The study of cartography will never be the same An intellectually bracing and marvellously provocative account of how

the mythical ideal of cartography developed over time and in the process distorted our understanding of maps Times Higher Education Cartography The Ideal and Its History offers both a sharp critique of current practice and a call to reorient the field of map studies A landmark contribution K ren Wigen coeditor of Time in Maps **Geography Environmental**
