Principles And Practices In Spice Crops Cultivation:

Principles And Practices In Spice Crops Cultivation Ramesh Chandra Upadhyaya, R.C., 2008-01-01 Spices are those plants the products of which are made use as foods adjuncts to add aroma and flavor. It contains essential oils which provide the flavor and taste. They also stimulate digestion on account of their carminative properties. Most spices increase the shelf life of foods especially the dry varieties.

Cultivation of Spice Crops Azhar Ali Farooqi, B. S. Sreeramu, K. N. Srinivasappa, 2005 Spices constitute an important group of agricultural commodities which since antiquity have been used for flavouring foods. Some species are used in the pharmaceutical, perfumery, cosmetics and related industries and others possess colourant, preservative, antioxidant, antiseptic and antibiotic properties. India is one of the leading spice producing and exporting countries in the world. In addition, large quantities of spices are consumed within the country for seasoning of food and for several other purposes. No other country in the world has such a diverse variety of spice crops as India. This book reflects the intensive research carried out on this group of 42 spice crops since 1971. The improvement in agro techniques and the release of many high yielding varieties. It provides exhaustive information on all aspects of cultivation, harvesting and processing of each crop and will be an invaluable aid to students, teachers and growers of spice crops both individual and corporate.

Handbook on Spices and Condiments (Cultivation, Processing and Extraction) H. Panda, 2010-10-01 The term spice and condiments applies to natural plant or vegetable products or mixtures in whole or ground form which are used for imparting flavour, aroma and piquancy to the food items. Spices and condiments are a major commercial crop in India and earn a major part of foreign exchange annually. They have been the backbone of agricultural industry. The importance of spices and condiment in dietary, medicinal and other uses and their commercial importance are immense. India is known the world over as the home of spices. Thus spices are an important group of agricultural goods which are virtually indispensable in the culinary art. Spice processing includes different steps: spice cleaning, spice reconditioning and spice grinding. Some spices were also used for preserving food like meat for a year or more without refrigeration. In the 16th century, cloves for instance were among the spices used to preserve food without refrigeration. Cloves contain a chemical called eugenol that inhibits the growth of bacteria. It is a natural antibiotic. It is still used to preserve food like Virginia Ham. Likewise, later mustard and ground mustard were also found to have preservative qualities. India alone contributes 25-30 % of the total world trade in spices. It may be interesting to note that nine spices namely pepper, ginger, clove, cinnamon, cassia, mace, nutmeg, pimento, allspice and cardamom alone contributed as much as 90% of the total world trade. Pepper is the most important spice in the world and so also of India. This book basically deals with brief history of spices, uses of spices, world trade in spices, area production of spices in India, area and production of spices in India, major and minor spices of India, spice processing, quality issues with spices, bird chillies and Tabasco chillies, basil or sweet basil, seasoning blend, duplication and tricks, sauces and gravies, snack seasonings, quality issues with spices etc.

This book is a single compendium which deals with all aspects and facts of spices and condiments which may meet the requirements of all those handling them at various stages from harvesting to their end use This book contains post harvest management the potentials of genetic engineering high production technology in spices with plantation and processing of various spices and condiments such as vanilla turmeric tamarind saffron black pepper onion mint ginger garlic curry leaf coriander etc
