ML With Concurrency Design Analysis Implementation And Application Monographs In Computer Science:

ML with Concurrency Flemming Nielson, 2012-12-06 Both functional and concurrent programming are relatively new paradigms with great promise In this book a survey is provided of extensions to Standard ML one of the most widely used functional languages with new primitives for concurrent programming Computer scientists and graduate students will find this a valuable guide to this topic

Computational Logic — CL 2000 John Lloyd, Veronica Dahl, Ulrich Furbach, Manfred Kerber, Kung-Kiu Lau, Catuscia Palamidessi, Luis M. Pereira, Yehoshua Sagiv, Peter J. Stuckey, 2003-06-26 These are the proceedings of the First International Conference on Computational Logic CL 2000 which was held at Imperial College in London from 24th to 28th July 2000 The theme of the conference covered all aspects of the theory implementation and application of computational logic where computational logic is to be understood broadly as the use of logic in computer science The conference was collocated with the following events 6th International Conference on Rules and Objects in Databases DOOD 2000 10th International Workshop on Logic based Program Synthesis and Transformation LOPSTR 2000 10th International Conference on Inductive Logic Programming ILP 2000 CL 2000 consisted of seven streams Program Development LOPSTR 2000 Logic Programming Theory and Extensions Constraints Automated Deduction Putting Theory into Practice Knowledge Representation and Non monotonic Reasoning Database Systems DOOD 2000 Logic Programming Implementations and Applications The LOPSTR 2000 workshop constituted the program development stream and the DOOD 2000 conference constituted the database systems stream Each stream had its own chair and program committee which autonomously selected the papers in the area of the stream Overall 176 papers were submitted of which 86 were selected to be presented at the conference and appear in these proceedings The acceptance rate was uniform across the streams In addition LOPSTR 2000 accepted about 15 extended abstracts to be presented at the conference in the program development stream

Research Directions in Parallel Functional Programming Kevin Hammond, Greg Michaelson, 2012-12-06 Programming is hard Building a large program is like constructing a steam locomotive through a hole the size of a postage stamp An artefact that is the fruit of hundreds of person years is only ever seen by anyone through a 100 line window In some ways it is astonishing that such large systems work at all But parallel programming is much much harder There are so many more things to go wrong Debugging is a nightmare A bug that shows up on one run may never happen when you are looking for it but unfailingly returns as soon as your attention moves elsewhere A large fraction of the program's code can be made up of marshalling and coordination algorithms The core application can easily be obscured by a maze of plumbing Functional programming is a radical elegant high level attack on the programming problem Radical because it dramatically eschews side effects elegant because of its close connection with mathematics high level because you can say a lot in one line But functional programming is definitely not yet mainstream That's the trouble with radical approaches it's hard for them to break through and become mainstream But that doesn't make functional programming any less fun and it has turned

out to be a wonderful laboratory for rich type systems automatic garbage collection object models and other stuff that has made the jump into the mainstream

Frontiers of Combining Systems Bernhard Gramlich, 2005-09-14 This book constitutes the refereed proceedings of the 5th International Workshop on Frontiers of Combining Systems FroCoS 2005 held in Vienna Austria in September 2005 The 19 revised full papers presented including 2 system descriptions were carefully reviewed and selected from 28 submissions The papers are organized in topical sections on combinations of logics theories and decision procedures constraint solving and programming combination issues in rewriting and programming as well as in logical frameworks and theorem proving systems

Programming Languages and Systems Atsushi Ohori, 2003-11-12 This book constitutes the refereed proceedings of the First Asian Symposium on Programming Languages and Systems APLAS 2003 held in Beijing China in November 2003 The 24 revised full papers presented together with abstracts of 3 invited talks were carefully reviewed and selected from 75 submissions The papers are devoted to concurrency and parallelism language implementation and optimization mobile computation and security program analysis and verification program transformation and calculation programming paradigms and language design programming techniques and applications program semantics categorical and logical foundations tools and environments type theory and type systems

SPIN Model Checking and Software Verification Klaus Havelund, John Penix, Willem Visser, 2006-12-31 The SPIN workshop is a forum for researchers interested in the subject of automata based explicit state model checking technologies for the analysis and verification of asynchronous concurrent and distributed systems The SPIN del checker <http://netlib.bell-labs.com/netlib/spin/whatispin.html> developed by Gerard Holzmann is one of the best known systems of this kind and has attracted a large user community This can likely be attributed to its efficient state exploration algorithms The fact that SPIN's modeling language Promela resembles a programming language has probably also contributed to its success Traditionally the SPIN workshops present papers on extensions and uses of SPIN As an experiment this year's workshop was broadened to have a slightly wider focus than previous workshops in that papers on software verification were encouraged Consequently a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages Solutions include translations from source code to Promela as well as specially designed model checkers that accept source code We believe that this is an interesting research direction for the formal methods community and that it will result in a new set of challenges and solutions Of course abstraction becomes the key solution to deal with very large state spaces However we also see potential for integrating model checking with techniques such as static program analysis and testing Papers on these issues have therefore been included in the proceedings

Computational Science - ICCS 2003. Part 3. Peter Sloot, 2003-05-22 The four volume set LNCS 2657 LNCS 2658 LNCS 2659 and LNCS 2660 constitutes the refereed proceedings of the Third International Conference on Computational Science ICCS 2003 held concurrently in Melbourne Australia and in St Petersburg Russia in June 2003 The four volumes present more than 460 reviewed contributed and invited papers and span

the whole range of computational science from foundational issues in computer science and algorithmic mathematics to advanced applications in virtually all application fields making use of computational techniques These proceedings give a unique account of recent results in the field *The British National Bibliography* Arthur James Wells,1998 *American Book Publishing Record* ,1996 **ACM SIGPLAN Notices** ,2004-05
