Modeling Rationality Morality And Evolution Vancouver Studies In Cognitive Science:

Modeling Rationality, Morality, and Evolution Peter Danielson, 1998 These essays focus on questions that arise when morality is considered from the perspective of rational choice and evolution It links questions like is it rational to be moral to the evolution of co operation and uses models from game theory evolutionary biology and cognitive science **Modeling Rationality, Morality, and Evolution** Peter Danielson, 2023 The Inheritance and Innateness of Grammars Myrna Gopnik, 1997-06-05 Is language somehow innate in the structure of the human brain or is it completely learned This debate is still at the heart of linguistics especially as it intersects with psychology and cognitive science In collecting papers which discuss the evidence and arguments regarding this difficult question The Inheritance and Innateness of Grammars considers cases ranging from infants who are just beginning to learn the properties of a native language to language impaired adults who will never learn one These studies show that while precursors of language exist in other creatures the abilities necessary for constructing full fledged grammars are part of the biological endowment of human beings The essays that comprise this volume test the range and specificity of that endowment while also contributing to our understanding of the intricate and complex relationship between language and biology Computational Modeling and Problem Solving in the Networked World Hemant K. Bhargava, Nong Ye, 2012-12-06 This book is a compilation of a selected subset of research articles presented at the Eighth INFORMS Computing Society Conference held in Chandler Arizona from January 8 to 10 2003 The articles in this book represent the diversity and depth of the interface between ORiMS operations research and the management sciences and CS AI computer science and artificial intelligence This volume starts with two papers that represent the reflective and integrative thinking that is critical to any scientific discipline These two articles present philosophical perspectives on computation covering a variety of traditional and newer methods for modeling solving and explaining mathematical models The next set includes articles that study machine learning and computational heuristics and is followed by articles that address issues in performance testing of solution algorithms and heuristics These two sets of papers demonstrate the richness of thought that takes place at the ORiMS and CSI AI interface The final set of articles demonstrates the usefulness of these and other methods at the interface towards solving problems in the real world covering e commerce workflow electronic negotiation music parallel computation and telecommunications The articles in this collection represent the results of cross fertilization between ORiMS and CSI AI making possible advances that could have not been achieved in isolation The continuing aim of the INFORMS Computing Society and this research conference is to invigorate and further develop this interface The Moral Skeptic Anita M. Superson, 2009-03-13 Anita Superson challenges the traditional picture of the skeptic who asks Why be moral While holding that the skeptic's position is important she builds an argument against it by understanding it more deeply and then shows what it would take to successfully defeat it Superson argues that we must defeat not only the action skeptic but the disposition skeptic who denies that being morally disposed is

rationally required and the motive skeptic who believes that merely going through the motions in acting morally is rationally permissible We also have to address the amoralist who is not moved by moral reasons he recognizes Superson argues for expanding the skeptic's position from self interest to privilege to include morally unjustified behavior targeting disenfranchised social groups as well as revising the traditional expected utility model to exclude desires deformed by patriarchy as irrational Lastly she argues that the challenge can be answered if it can be shown that it is in an important way inconsistent and therefore irrational to privilege oneself over others The Moral Skeptic makes an important contribution to both metaethics moral theory and feminist philosophy and brings feminist thinking into the larger discussion of the skeptical challenge

Liberty, Games and Contracts Malcolm Murray, 2016-05-06 Jan Narveson is one of the most significant contemporary defenders of the libertarian political position Unlike other libertarians who typically defend their view with reference to natural rights or an appeal to utilitarianism Narveson's main contribution has been to offer a philosophical defence of libertarianism based on a Hobbesian individualist contractarian ethic Critiques of Narveson's contractarian libertarianism fall into three categories those that reject contractarian moral theory those that reject any link between contractarianism and libertarianism and those that accuse libertarians of conflating liberty with property In this book Malcolm Murray brings together the most significant of Narveson's critics and presents their work alongside replies by Jan Narveson

Weakness of Will and Practical Irrationality Sarah Stroud, Christine Tappolet, 2003-09-04 Among the many practical failures that threaten us weakness of will or akrasia is often considered to be a paradigm of irrationality The eleven new essays in this collection written by an excellent international team of philosophers some well established some younger scholars give a rich overview of the current debate over weakness of will and practical irrationality more generally Issues covered include classical questions such as the distinction between weakness and compulsion the connection between evaluative judgement and motivation the role of emotions in akrasia rational agency and the existence of the will The also include new topics such as group akrasia strength of will the nature of correct choice the structure of decision theory the temporality of prudential reasons and emotional rationality Because these questions cut across philosophy of mind and ethics the collection will be essential reading for scholars postgraduates and upper level undergraduates in both these fields

Engaged Philosophy David Braybrooke, 2007-01-01 David Braybrooke is one of the most important figures in North American philosophy His work in political philosophy is both prolific and significant and he has contributed to the philosophical corpus books on topics as diverse as utilitarianism natural law and moral objectives Engaged Philosophy is a collection of original essays written in honour of Braybrooke by some of his colleagues and students at Halifax's Dalhousie University

Perception Kathleen Akins, 1996-04-25 The majority of the papers in this collection were presented at a Vancouver Studies in Cognitive Science Conference in February in 1992 Vancouver Canada

Soft Computing for Hybrid Intelligent Systems Oscar Castillo, Patricia Melin, Witold Pedrycz, 2008-09-10 We describe in this book new methods and

applications of hybrid intelligent systems using soft computing techniques Soft Computing SC consists of several intelligent computing paradigms including fuzzy logic neural networks and evolutionary algorithms which can be used to produce powerful hybrid intelligent systems The book is organized in five main parts which contain a group of papers around a similar subject The first part consists of papers with the main theme of intelligent control which are basically papers that use hybrid systems to solve particular problems of control The second part contains papers with the main theme of pattern recognition which are basically papers using soft computing techniques for achieving pattern recognition in different applications The third part contains papers with the themes of intelligent agents and social systems which are papers that apply the ideas of agents and social behavior to solve real world problems The fourth part contains papers that deal with the hardware implementation of intelligent systems for solving particular problems The fifth part contains papers that deal with modeling simulation and optimization for real world applications
