Modern Compiler Implementation In Java:

Modern Compiler Implementation in C Andrew W. Appel, Maia Ginsburg, 2004-07-08 Describes all phases of a modern compiler including techniques in code generation and register allocation for imperative functional and object oriented languages

Modern Compiler Implementation in Java Andrew W. Appel, 1998 Last year you may have seen the **Modern Compiler Implementation in C Basic Techniques** 1997 which was the preliminary edition of our new 1998 textbook **Modern Compiler Implementation in C** The new expanded version of this textbook describes all phases of a modern compiler lexical analysis parsing abstract syntax semantic actions intermediate representations instruction selection via tree matching dataflow analysis graph coloring register allocation and runtime systems It includes good coverage of current techniques in code generation and register allocation as well as functional and object oriented languages that are missing from most books In addition more advanced chapters are now included so that it can be used as the basis for two semester or graduate course The most accepted and successful techniques are described in a concise way rather than as an exhaustive catalog of every possible variant Detailed descriptions of the interfaces between modules of a compiler are illustrated with actual C header files The first part of the book **Fundamentals of Compilation** is suitable for a one semester first course in compiler design The second part **Advanced Topics** which includes the advanced chapters covers the compilation of object oriented and functional languages garbage collection loop optimizations SSA form loop scheduling and optimization for cache memory hierarchies A unique feature of the book is a well designed compiler implementation project in Java including front end and high tech back end phases so that students can build a complete working compiler in one semester Accompanying support software is available
