Quantitative Ecological Theory An Introduction To Basic Models:

Quantitative Ecological Theory M.R. Rose, 2012-12-06 This is an inadvertent book though it did arise naturally enough from a course I give in theoretical ecology But I wouldn't have given the course at all if one colleague in my department hadn't left for a leave of absence while another abruptly resigned This propelled me to the fore where this teaching responsibility was concerned one I had never had any intention of discharging Then it turned out that one of my students was regularly unable to make half the classes As a result I began giving him my lecture notes each week As I knew that someone else would be reading them I began to write my notes more carefully Naturally enough the other students soon began to demand the notes too Eventually they were indulged Thus I found myself writing a textbook manuscript By the next year the students were handed all their notes in one package at the outset But these were still just hand written Inevitably the demand that they be typed arose This I didn't want to do until I found a publisher As it turned out Tim Hardwick of Croom Helm was willing to have his firm fill this role to my great satisfaction and his considerable frustration I have been a desultory author about producing this final text and can only express my gratitude for his enduring patience over more than 18 months of delays

Dochain,Peter A. Vanrolleghem,2001-12-01 Environmental quality is becoming an increasing concern in our society In that context waste and wastewater treatment and more specifically biological wastewater treatment processes play an important role In this book we concentrate on the mathematical modelling of these processes The main purpose is to provide the increasing number of professionals who are using models to design optimise and control wastewater treatment processes with the necessary background for their activities of model building selection and calibration The book deals specifically with dynamic models because they allow us to describe the behaviour of treatment plants under the highly dynamic conditions that we want them to operate e g Sequencing Batch Reactors or we have to operate them e g storm conditions spills Further extension is provided to new reactor systems for which partial differential equation descriptions are necessary to account for their distributed parameter nature e g settlers fixed bed reactors The model building exercise is introduced as a step wise activity that in this book starts from mass balancing principles In many cases different hypotheses and their corresponding models can be proposed for a particular process It is therefore essential to be able to select from these candidate models in an objective manner To this end structure characterisation methods are introduced Important sections of the book deal with the collection of high quality data using optimal experimental design parameter estimation techniques for calibration and the on line use of models in state and parameter estimators Contents Dynamical Modelling Dynamical Mass Balance Model Building and Analysis Structure Characterisation SC Structural Identifiability Practical Identifiability and Optimal Experiment Design for Parameter Estimation OED PE Estimation of Model Parameters Recursive State and Parameter Estimation Glossary Nomenclature Laws, Theories, and Patterns in Ecology Walter Dodds,2009-08-05 Physics and chemistry are distinguished from biology by the way generalizations are codified into theories tested by observation and experimentation This work enumerates generalizations in ecology It describes how the practice of science in general and ecology specifically yields theories and laws BOOK PUBLISHER WEBSITE The Ecology of the Ancient Greek World Robert Sallares,1991 A pioneering study in historical population biology this book offers the first comprehensive ecological history of the ancient Greek world It proposes a new model for treating the relationship between the population and the land centering on the distribution and abundance of living organisms The American Naturalist ,1987 *Ecocentric fisheries management in european seas: Data gaps, base models and initial assessments, volume I* Athanassios C.
