Physics and Literature Aura Heydenreich, Klaus Mecke, 2021-12-20 *Physics and Literature* is a unique collaboration between physicists, literary scholars and philosophers: the first collection of essays to examine together how science and literature, beneath their practical differences, share core dimensions: forms of questioning, thinking, discovering and communicating insights. This book advances an in-depth exploration of relations between physics and literature from both perspectives. It turns around the tendency to discuss relations between literature and science in one-sided and polarizing ways. The collection is the result of the inaugural conference of ELINAS, the Erlangen Center for Literature and Natural Science, an initiative dedicated to building bridges between literary and scientific research. ELINAS revitalizes discussion of science-literature interconnections with new topics, ideas and angles by organizing genuine dialogue among participants across disciplinary lines. The essays explore how scientific thought and practices are conditioned by narrative and genre-fiction models and metaphors, and how science in turn feeds into the meaning-making of literary and philosophical texts. These interdisciplinary encounters enrich reflections on epistemology, cognition and aesthetics. **Narrative and**

Cognition in Literature and Science Michael Sinding, Aura Heydenreich, Klaus Mecke, 2025-07-21 This volume explores cognitive perspectives on how science and narrative shape one another. Narrative is a principle of cognition and cognition is fundamental to narrative. This duality enables a deeper mapping of the feedback between story and the natural sciences. Science as a culturally organized and systematic mode of knowing the world may seem opposed to narrative thinking. Yet they are deeply interwoven. Scientists tell many kinds of stories across genres and media. In thought experiments, lab experiments, written arguments and histories, and philosophies of fields, they recount and interpret unfoldings of events at often uncanny scales: from particle collisions to the evolution of life to cosmic expansion. Science stories go beyond science. Early science is entwined with myth, religion and magic. We still mythologize beneficent or evil geniuses, the promises and perils of technology. Teachers, journalists, politicians and lawyers all tell science stories for their own purposes. Literary artists use scientific ideas and forms, reimagining physical forces, causality and time in storyworlds, themes and figures. This is the first cognition-focused, multi-disciplinary analysis of these narrative-science relations. **Literatur im Jahrhundert der**

Physik Clemens Özelt, 2018-07-02 Interaktive Gattungen machen dominante Linien der komplexen Austauschbeziehungen zwischen Literatur und Physik im 20. Jahrhundert lesbar. Jahrhundertwissenschaft, Schicksalswissenschaft oder Leitwissenschaft des Jahrhunderts sind wiederkehrende Apostrophierungen, mit denen Wissenschaftshistoriker auf die singuläre Rolle der Physik im 20. Jahrhundert hinweisen. Wie die Literatur diese Bedeutung erfasst und mitgestaltet hat und dabei ihrerseits von der Physik umgestaltet wurde, zeigt die Studie in funktionsgeschichtlich orientierten Gattungsanalysen. Gattungen reagieren als Bedarfs-synthesen auf gesellschaftliche Herausforderungen, machen auf sie aufmerksam und gestalten sie so auch beim Aufstieg einer neuen Leitwissenschaft. Die fünf interaktiven Gattungen: Roman, Dialog, Brief,

Tagebuch und Trag die werden als Formungen solcher gesellschaftlichen Bed rfnisse vorgestellt die einerseits den engen Rahmen der Fachwissenschaft Physik andererseits den Bereich der literarischen Imagination bersteigen Sie machen erstmals dominante Linien der komplexen Austauschbeziehungen lesbar *Narrative Structure and Narrative Knowing in Medicine and Science* Martina King, Tom Kindt, 2023-11-20 It has become a truism that we all think in the narrative mode both in everyday life and in science But what does this mean precisely Scholars tend to use the term narrative in a broad sense implying not only event sequencing but also the representation of emotions basic perceptual processes or complex analyses of data sets The volume addresses this blind spot by using clear selection criteria only non fictional texts by experts are analysed through the lens of both classical and postclassical narratology from Aristotle to quantum physics and from nineteenth century psychiatry to early childhood psychology they fall under various genres such as philosophical treatises case histories textbooks medical reports video clips and public lectures The articles of this volume examine the central but continuously shifting role that event sequencing plays within scholarly and scientific communication at various points in history and the diverse functions it serves such as eye witnessing making an argument inferencing or reasoning Thus they provide a new methodological framework for both literary scholars and historians of science and medicine

Narrated Communities - Narrated Realities, 2015-05-19 Culture studies try to understand how people assume identities and how they perceive reality In this perspective narration as a basic form of cognitive processing is a fundamental cultural technique Narrations provide the coherence temporal organization and semantic integration that are essential for the development and communication of identity knowledge and orientation in a socio cultural context In essence Anderson s Imagined Communities need to be thought of as Narrated Communities from the beginning Narration is made up by what people think and vice versa narration makes up people s thoughts What is considered fictitious or real no longer separates narratives from an outside they refer to but rather represents different narratives Narration not only constructs notions of what was real in retrospect but also prospectively creates possible worlds even in the supposedly hard sciences as in e g the imaginative simulation of physical processes The book s unique interdisciplinary approach shows how the implications of this fundamental insight go far beyond the sphere of literature and carry weight for both scholarly and scientific disciplines

Artful Experiments Philipp Erchinger, 2018-09-03 Reads Victorian literature and science as artful practices that surpass the theories and discourses supposed to contain them
