Quick Look Immunology:

Common Immunity Roberto Esposito, 2023-06-08 After two years of global pandemic it is no surprise that immunization is now at the center of our experience From the medicalization of politics to the disciplining of individuals from lockdowns to mass vaccination programs contemporary societies seem to be firmly embedded in a syndrome of immunity To understand the ambivalent effects of this development it is necessary to go back to its modern genesis when the languages of law politics and medicine began to merge into the biopolitical regime we have been living under for some time This regime places a high priority on immunization and security no security is more important than health security The Covid 19 pandemic has taken the dynamic of immunization to a new level for the first time in history we see societies seeking to achieve generalized immunity in their entire populations through vaccination This allows us to glimpse the possibility of a common immunity that strengthens the relation between community and immunity The dramatic tensions we have experienced in recent years between security and freedom norm and exception power and existence all refer to the complex relationship between community and immunity the decisive features of which are reconstructed in this book Building on the prescient argument originally developed two decades ago in *Immunitas* Roberto Esposito demonstrates in this new book how the pandemic and our responses to it have brought into sharp relief the fundamental biopolitical conditions of our contemporary societies
