Selected Papers II, with Commentaries Chen Ning Yang, 2013 This book is a collection of Professor Chen Ning Yang's personally selected papers 1971-2012 supplemented by his commentaries. Its contents reflect the professor's changing interests after he reached age sixty.

Selected Papers Of Chen Ning Yang Ii: With Commentaries Chen Ning Yang, 2013-05-10 Professor Chen Ning Yang, an eminent contemporary physicist, was Professor at the Institute for Advanced Study Princeton, New Jersey, from 1955 to 1966 and Albert Einstein Professor of Physics at the State University of New York at Stony Brook until his retirement in 1999. He has been Distinguished Professor at Large at the Chinese University of Hong Kong since 1986 and Professor at Tsinghua University Beijing since 1998. Since receiving his PhD from the University of Chicago in 1948, Prof. Yang has made great impacts in both abstract theory and phenomenological analysis in modern physics. In 1983 he published *Selected Papers 1945-1980 With Commentary*. It has been considered by Freeman Dyson as one of his favorite books. The present book is a sequel to that earlier volume. It is a collection of his personally selected papers 1971-2012 supplemented by his insightful commentaries. Its contents reflect Professor Yang's changing interests after he reached age sixty. It also includes commentaries written by him in 2011 when he is 89 years old. The papers and commentaries in this unique collection comprise a remarkable personal and professional chronicle shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry.

Selected Papers (1945-1980) Of Chen Ning Yang (With Commentary) Chen Ning Yang, 2005-08-22 A remarkable personal and professional chronicle by one of today's leading physicists, this is a collection of Chen Ning Yang's personally selected papers supplemented by his insightful commentaries. Including previously unpublished or hard-to-find works, this volume contains Yang's important papers on statistical physics, nuclear forces, and particle physics. Among them are his seminal work with T. D. Lee on the nonconservation of parity for which they won the Nobel Prize, and his work with R. L. Mills which led to modern gauge theories with their exciting prospects for the broad unification of field theories. The commentaries were written especially for this volume and provide a fascinating account of Yang's development as a physicist as well as a look at many important physicists of the 20th century. They trace the development of Yang's interests and ideas from his graduate school days to the present, showing how he worked with his colleagues and how their physics came into being. Together, the papers and commentaries in this unique collection comprise a powerful personal statement shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry.

Selected Papers (1945-1980), with Commentary Chen Ning Yang, 2005 Consists of 73 articles and added items exclusively for this edition.
