Information Processing and Biological Systems Samuli Niiranen, Andre Ribeiro, 2011-03-10 Living beings require constant information processing for survival In cells information is being processed and propagated at various levels from the gene regulatory network to chemical pathways to the interaction with the environment How this is achieved and how information is coded is still poorly understood For example what a cell interprets as information in the temporal level of an mRNA and what is interpreted as noise remains an open question Recently information theoretical methods and other tools developed in the context of engineering and natural sciences have been applied to study diverse biological processes This book covers the latest findings on how information is processed in various biological processes ranging from information processing and propagation in gene regulatory networks to information processing in natural language An overview is presented of the state of the art in information processing in biological systems and the opinion of current leaders in this research field on future research directions

Biological Information: New Perspectives - Proceedings Of The Symposium John C Sanford, Robert J Marks II, Michael J Behe, William A Dembski, Bruce L Gordon, 2013-06-03 In the spring of 2011 a diverse group of scientists gathered at Cornell University to discuss their research into the nature and origin of biological information This symposium brought together experts in information theory computer science numerical simulation thermodynamics evolutionary theory whole organism biology developmental biology molecular biology genetics physics biophysics mathematics and linguistics This volume presents new research by those invited to speak at the conference The contributors to this volume use their wide ranging expertise in the area of biological information to bring fresh insights into the many explanatory difficulties associated with biological information These authors raise major challenges to the conventional scientific wisdom which attempts to explain all biological information exclusively in terms of the standard mutation selection paradigm Several clear themes emerged from these research papers 1 Information is indispensable to our understanding of what life is 2 Biological information is more than the material structures that embody it 3 Conventional chemical and evolutionary mechanisms seem insufficient to fully explain the labyrinth of information that is life By exploring new perspectives on biological information this volume seeks to expand encourage and enrich research into the nature and origin of biological information
