Role of Antioxidants in Mitigating Plant Stress Azamal Husen, 2025-07-01 *Role of Antioxidants in Mitigating Plant Stress* explores the fundamental roles and mechanistic approaches of antioxidant stress tolerance strategies. With chapters addressing both enzymatic and non enzymatic antioxidants it provides a clear guide for understanding plant responses. Presenting current understanding of these components the book features their role, molecular properties and reaction mechanisms to various environmental conditions. This book provides an important reference for researchers and advanced level students seeking to improve plant health. Plants are regularly exposed to various kinds of abiotic and biotic stresses in their natural environmental conditions. These stresses have significant influence on agriculture worldwide and thus lead to massive economic losses as well as food insecurity. Research has identified many of the effects of and mitigation techniques for various stresses that impact plant systems. Strategies for strengthening the antioxidant defense system can increase yields and protect crop plants from a variety of stresses. Discusses the modulation of antioxidant systems that enable plants to initiate short and long term mitigation responses. Examines the potential of non enzymatic and enzymatic antioxidants in stress response. Explores coordination of antioxidants, plant hormones and PGPR for higher plant performance under various stresses.

Nitric Oxide in Developing Plant Stress Resilience M. Iqbal R Khan, Noushina Iqbal, Peter Poor, Antonio Ferrante, 2023-08-05 *Nitric Oxide in Developing Plant Stress Resilience* presents a strong focus on genetics and molecular mechanisms examining crosstalk with other signaling molecules and the role this plays in the alleviation of oxidative damage. Abiotic stress negatively impacts plants productivity and alters the metabolism at the cellular or whole plant level disturbing the mineral nutrients status, enzyme activities and osmotic homeostasis. Beginning with the biosynthesis of NO and its mode of action, chapters review various molecular interactions including phytohormonal crosstalk, ROS metabolism, post translational modification and nutrients homeostasis. In addition the book also highlights genome editing and proteomic approaches that can be used to manipulate NO responses. This is an essential resource for students and researchers interested in plant physiology, biochemistry and genetics. Highlights how Nitric Oxide acts as a signaling molecule and the ways in which this can help plants develop stress tolerance. Discusses how NO interacts with other signaling molecules including crosstalk. Considers the advances and future implications of NO in agriculture.

Nitric Oxide and Signaling in Plants, 2016-02-25 *Advances in Botanical Research* publishes in depth and up to date reviews on a wide range of topics in plant sciences. Currently in its 77th volume the series features several reviews by recognized experts on all aspects of plant genetics, biochemistry, cell biology, molecular biology, physiology and ecology. Publishes in depth and up to date reviews on a wide range of topics in plant sciences. Contains commentary by recognized experts on all aspects of plant genetics, biochemistry, cell biology, molecular biology, physiology and ecology.

Reactive Oxygen Species and Antioxidant Systems in Plants: Role and Regulation under Abiotic Stress M. Iqbal R. Khan, Nafees A. Khan, 2017-08-02 The present edited book is an

attempt to update the state of art of the knowledge on metabolism of ROS and antioxidants and their relationship in plant adaptation to abiotic stresses involving physiological biochemical and molecular processes The chapters are much focused on the current climate issues and how ROS metabolism can manipulate with antioxidant system to accelerate detoxification mechanism It will enhance the mechanistic understanding on ROS and antioxidants system and will pave the path for agricultural scientists in developing tolerant crops to achieve sustainability under the changing environmental conditions The increase in abiotic stress factors has become a major threat to sustainability of crop production This situation has led to think ways which can help to come out with potential measures for which it is necessary to understand the influence of abiotic stress factors on crops performance and the mechanisms by which these factors impact plants It has now become evident that abiotic stress impacts negatively on plant growth and development at every stage of plant s life Plants adapt to the changing environment with the adjustment at physiological biochemical and molecular levels The possible mechanisms involved in the negative effects of abiotic stress factors are excess production of reactive oxygen species ROS They alter physiological and molecular mechanisms leading to poor performance of plants Plants however are able to cope with these adverse effects by inducing antioxidant systems as the priority Nevertheless the dual role of ROS has now been ascertained which provides an evidence for regulation of plant metabolism positively on a concentration dependent manner Under conditions of high ROS production the antioxidant system plays a major role in diminishing the effects of ROS Thus ROS production and antioxidant system are interwoven with abiotic stress conditions The antioxidants have the capacity to hold the stability in metabolism in order to avoid disruption due to environmental disturbances *Progress in Botany Vol. 82*
