A Most Improbable Journey Walter Alvarez, 2016-11-15 A thrilling synthesis from a brilliant scientist who discovered one of the most important chapters in our history

Sean B Carroll Big History the field that integrates traditional historical scholarship with scientific insights to study the full sweep of our universe has so far been the domain of historians

Famed geologist Walter Alvarez best known for the Impact Theory explaining dinosaur extinction has instead championed a science first approach to Big History Here he wields his unique expertise to give us a new appreciation for the incredible occurrences from the Big Bang to the formation of supercontinents the dawn of the Bronze Age and beyond that have led to our improbable place in the universe

First Light Emma Chapman, 2020-11-26 Opens a window into a previously dark and secret time in our universe s history when the first stars were born Astronomers have successfully observed a great deal of the Universe s history from recording the afterglow of the Big Bang to imaging thousands of galaxies and even to visualising an actual black hole There s a lot for astronomers to be smug about But when it comes to understanding how the Universe began and grew up we are literally in the dark ages In effect we are missing the first one billion years from the timeline of the Universe This brief but far reaching period in the Universe s history known to astrophysicists as the Epoch of Reionisation represents the start of the cosmos as we experience it today The time when the very first stars burst into life when darkness gave way to light After hundreds of millions of years of dark uneventful expansion one by the one these stars suddenly came into being This was the point at which the chaos of the Big Bang first began to yield to the order of galaxies black holes and stars kick starting the pathway to planets to comets to moons and to life itself Incorporating the very latest research into this branch of astrophysics this book sheds light on this time of darkness telling the story of these first stars hundreds of times the size of the Sun and a million times brighter lonely giants that lived fast and died young in powerful explosions that seeded the Universe with the heavy elements that we are made of Dr Emma Chapman tells us how these stars formed why they were so unusual and what they can teach us about the Universe today She also offers a first hand look at the immense telescopes about to come on line to peer into the past searching for the echoes and footprints of these stars to take this period in the Universe s history from the realm of theoretical physics towards the wonder of observational astronomy

Sacred Science William H. West, 2025-04-08 If you review of the impulses that created the universe directed the unfolding of life and empowered human consciousness you reach an undeniable conclusion an omnipotent Creator supervised the unfolding of our universe From the moment of creation to the emergence of a planet tailor made for life from the journey of multi million species to the development of an upright creature hungry for God science tells a sacred story a

superintelligent Creator used His mathematical genius to convert lifeless equations into galaxies planets and people His love has been visible throughout the process Could our journey reflect thousands of random accidents with no divine guidance Creation delivered impulses that filled the universe with galaxies and stars Eliminate any one of those blueprints and the universe would have been stillborn Stars produced a perfect mix of elements to bring the universe to life Without a robust ensemble of gene and protein sequences life might still be living at the bottom of the sea Hundreds of human genes convert the neurons of a human infant into trillions of networks in an adult brain Without those God given genes a dangerous world may have left us trapped in the treetops with no interest in science at all But God shared His mind and triggered the emergence of human consciousness Where do we find ourselves after centuries of that scientific searching We see that science reflects its source Science is a gift of God's creative love and is nothing less than sacred
