Research Techniques In Animal Ecology:

Research Techniques in Animal Ecology Luigi Boitani, Todd Fuller, 2000-06-01 The present biodiversity crisis is rife with opportunities to make important conservation decisions however the misuse or misapplication of the methods and techniques of animal ecology can have serious consequences for the survival of species Still there have been relatively few critical reviews of methodology in the field This book provides an analysis of some of the most frequently used research techniques in animal ecology identifying their limitations and misuses as well as possible solutions to avoid such pitfalls In the process contributors to this volume present new perspectives on the collection analysis and interpretation of data Research Techniques in Animal Ecology is an overarching account of central theoretical and methodological controversies in the field rather than a handbook on the minutiae of techniques The editors have forged comprehensive presentations of key topics in animal ecology such as territory and home range estimates habitation evaluation population viability analysis GIS mapping and measuring the dynamics of societies Striking a careful balance each chapter begins by assessing the shortcomings and misapplications of the techniques in question followed by a thorough review of the current literature and concluding with possible solutions and suggested guidelines for more robust investigations Research Techniques In Animal Ecology Luigi Boitani, 2000

Critical Research Techniques in Animal and Habitat Ecology Kaushalendra Kumar Jha, Michael O'Neal Campbell, 2021 This book covers selected topics on research methods in modern ecology through the lens of 8 chapters focusing on animal ecology landcover assessment and habitat change human perspectives and management and research techniques with examples taken from the Indian subcontinent This area has emerged as one of the pivotal zones where cutting edge applications may be tested Topics examined include the development and management of computer software techniques and the syntheses of these into pre existing research methods chemical analyses including studies of animal dietary and foraging patterns landcover habitat and plant ecological change and even human animal relations and genetic studies Remote sensing and geographical information systems are considered as cutting edge research methods at small medium and large scale levels including more accurate positioning systems more sensitive tracking systems the removal of obstacles to clearer observation and species identification such as darkness and poor lighting dense vegetation and coarse image resolution and more comparative studies across different local contexts and global ecosystems The topics cover geoinformatics applications to forest management in India the paradigm shifts in this area and the promotion and integration of sustainable forest management SFM and geoinformatics within the National Working Plan Code Another case study is of Geoinformatics Climate Change Habitat Dynamics and a Case of Vultures in Central India focusing on vulture ecology and related climatic variables assessed with geoinformatics Species Distribution Models SDMs and Global Circulation Models GCMs Other topics concern the use of tracking technologies including drones the use of thermal and infrared drones in the study of large mammalian carnivores the role of remote sensing and GIS in the assessment of natural

resource development clustering around the central concept of change detection and the monitoring of agricultural development using socio cultural parameters This book presents these issues as some factors among the vast number of current ecological issues Critical Research Techniques in Animal and Habitat Ecology Kaushalendra Kumar Jha, Michael O'Neal Campbell, 2021 This book covers selected topics on research methods in modern ecology through the lens of 8 chapters focusing on animal ecology landcover assessment and habitat change human perspectives and management and research techniques with examples taken from the Indian subcontinent This area has emerged as one of the pivotal zones where cutting edge applications may be tested Topics examined include the development and management of computer software techniques and the syntheses of these into pre existing research methods chemical analyses including studies of animal dietary and foraging patterns landcover habitat and plant ecological change and even human animal relations and genetic studies Remote sensing and geographical information systems are considered as cutting edge research methods at small medium and large scale levels including more accurate positioning systems more sensitive tracking systems the removal of obstacles to clearer observation and species identification such as darkness and poor lighting dense vegetation and coarse image resolution and more comparative studies across different local contexts and global ecosystems The topics cover geoinformatics applications to forest management in India the paradigm shifts in this area and the promotion and integration of sustainable forest management SFM and geoinformatics within the National Working Plan Code Another case study is of Geoinformatics Climate Change Habitat Dynamics and a Case of Vultures in Central India focusing on vulture ecology and related climatic variables assessed with geoinformatics Species Distribution Models SDMs and Global Circulation Models GCMs Other topics concern the use of tracking technologies including drones the use of thermal and infrared drones in the study of large mammalian carnivores the role of remote sensing and GIS in the assessment of natural resource development clustering around the central concept of change detection and the monitoring of agricultural development using socio cultural parameters This book presents these issues as some factors among the vast number of current ecological issues **Camera Traps in Animal Ecology** Allan F. O'Connell, James D. Nichols, K. Ullas Karanth, 2010-10-05 Remote photography and infrared sensors are widely used in the sampling of wildlife populations worldwide especially for cryptic or elusive species Guiding the practitioner through the entire process of using camera traps this book is the first to compile state of the art sampling techniques for the purpose of conducting high quality science or effective management Chapters on the evaluation of equipment field sampling designs and data analysis methods provide a coherent framework for making inferences about the abundance species richness and occupancy of sampled animals The volume introduces new models that will revolutionize use of camera data to estimate population density such as the newly developed spatial capture recapture models It also includes richly detailed case studies of camera trap work on some of the world's most charismatic elusive and endangered wildlife species Indispensable to wildlife conservationists ecologists

biologists and conservation agencies around the world the text provides a thorough review of the subject as well as a forecast for the use of remote photography in natural resource conservation over the next few decades **Critical Research**

Techniques in Animal and Habitat Ecology Michael O'Neal Campbell, 2021 This book covers selected topics on research methods in modern ecology through the lens of 12 different chapters focusing on animal ecology landcover assessment and habitat change human perspectives and management and research techniques Topics emphasize the development of enhanced computer software techniques and the syntheses of these into pre existing research methods chemical analyses including studies of animal dietary and foraging patterns landcover habitat and plant ecological change and even human animal relations and genetic studies Remote sensing and geographical information systems are considered as cutting edge research methods at small medium and large scale levels including more accurate positioning systems more sensitive tracking systems the removal of obstacles to clearer observation and species identification such as darkness and poor lighting dense vegetation and coarse image resolution and more comparative studies across different local contexts and global ecosystems The topics cover vulture ecology the factors for the decline and management of Asian vultures the use of tracking technologies including drones in the study of urban vulture ecology the use of thermal and infrared drones in the study of large mammalian carnivores the role of remote sensing and GIS in the assessment of natural resource development clustering around the central concept of change detection the monitoring of agricultural development using socio cultural parameters the impacts of chemical pollution on raptors the chemistry of vulture foraging habitat dynamics for storks in Malaysia Indian ecotourism in tiger habitats and human wildlife conflicts in Brazil Other topics concern research on Bio environmental Monitoring and Assessment using eDNA and Genome based environmental monitoring and the dynamics social perceptions of natural landscapes in Europe and international examples of the Landscape Ecology of Urban Avian Scavengers This book argues that these issues represent some cutting factors among the vast number of current ecological issues **Applications for Advancing Animal Ecology** Michael L. Morrison, Leonard A. Brennan, Bruce G. Marcot, William M. Block, Kevin S. McKelvey, 2021-05-11 Practical guidance for wildlife professionals working to improve study design data analysis and the application of results to habitat and population management Winner of the Wildlife Society Publications Book Award by The Wildlife Society Despite major advances in sampling techniques and analytical methods many animal ecologists conduct research that is primarily relevant to a specific time and place They also tend to focus more on the statistical analyses and nuances of modeling than actual study design Arguing that studies of animal ecology should always begin with a focus on the behaviors and characteristics of individual organisms including how they form into distinct biological populations Applications for Advancing Animal Ecology takes a fresh and critical look at the field Building from its companion volume Foundations for Advancing Animal Ecology this practical book presents readers with the principal methods used to observe animal behavior Teaching them to assess resource abundance categories of species environmental

relationships models it also explores major aspects of measuring animal habitat what to measure and how to measure it common sampling and estimation methods to assess population parameters when to measure and how to analyze data problems that will confront ecologists in the coming years and how to gather information to adequately address them and how the experimental approach can be used to advance the science of animal ecology Throughout the book the authors stress the importance of speaking a common and well defined language Avoiding vague and misleading terminology they assert will help ecologists translate science into meaningful and lasting actions in the environment Taking the perspective of the organism of interest in developing concepts and applications the authors always keep the potentially biased human perspective in focus They also provide a selection of suggested research projects cautions and caveats A major advancement in understanding the factors underlying wildlife habitat relationships Applications for Advancing Animal Ecology will be an invaluable resource to natural resource management professionals and practitioners including state and federal agencies non governmental organizations and environmental consultants

Methods for Ecological Research on Terrestrial Small Mammals Robert McCleery, Ara Monadjem, L. Mike Conner, James D. Austin, Peter J. Taylor, 2022-01-04 All the information researchers students and practitioners need to conduct innovative state of the art research on small mammals Rodents and insectivores constitute the vast majority of mammals on our planet yet we often overlook the importance of this group As seed dispersers prey species and disease regulators these animals are critical to the functioning of our ecological systems While considerable material exists that describes these species there has been no dedicated guide explaining how to effectively research them until now Methods for Ecological Research on Terrestrial Small Mammals is a one stop resource compiling all the information readers need to conduct state of the art research on small terrestrial mammals across the globe The authors cover the full spectrum of issues from capture handling identification reproduction demography and taxonomy to behavior diet evolution diseases movements morphometrics and more They also highlight the latest techniques while carefully explaining the tried and tested methods needed to conduct rigorous scientific inquiries provide step by step examples and case studies demonstrating how the methods discussed can be used in actual research projects compare and contrast methodologies analytical techniques and software packages helping researchers determine which pathways and tools will yield the best results for their studies A comprehensive and invaluable resource Methods for Ecological Research on Terrestrial Small Mammals is a must have for any ecologist working on small mammals
