Plants Biotechnology And Agriculture Modular Texts:

Plants, Biotechnology and Agriculture Denis Murphy, 2011 This book aims to provide readers with a modern perspective on plants both as biological organisms and useful resources for people to exploit The early chapters cover plant evolution genomics metabolism organization development and responses to the environment In each case there is an emphasis on how biotechnology can be used to manipulate such processes for the benefit of humanity The scope of the book ranges from the earliest evidence of pre agricultural plant manipulation over 30 000 years ago to the latest recombinant DNA methods used in 21st century agricultural systems Unlike most textbooks where there is a focus on the technical aspects of genetic engineering this book will take a wider view of what constitutes modern plant biotechnology In addition the broader social economic commercial legal and ethical contexts of all forms of crop related technology will also be examined These include an analysis of the immense contributions of chemical and mechanical technologies The role of plant biotechnology is considered in tackling enormous challenges to the welfare of human populations around the world Such challenges include the predicted massive population increases over the next few decades irreversible depletion of non renewable resources of all types and the spectre of climate change that might have unpredictable effects on crop growth e g by reducing rainfall altering temperatures or leading to the emergence of new pests and diseases These developments have the potential to seriously affect crop productivity in some of the most densely populated and vulnerable regions of the world Medicinal Plant Biotechnology Rajesh Arora, 2010 Printbegr nsninger Der kan printes 10 sider ad gangen og max 40 sider pr session
