A The need to know what you are doing from inspiration through protocol development research ethics and protocol approval process

B Basic study structures such as research designs appropriate for office or clinical environments

C Establishing credibility of data and psychophysiological publications

D Statistics for evaluating and interpreting psychophysiological data and

E Synthesizing these elements so that write ups and presentations use appropriate research designs and statistics provide an adequate basis to secure any needed grants and provide credible evidence to the professional community

Additional sections F through J provide helps in the form of a glossary sample protocols that exemplify good and bad models recommendations for further readings and references This book would work well for graduate students in applied psychophysiology as it takes one through a carefully laid out series of steps from the beginning of inspiration through completed investigation and publication It is an important resource for anyone reading or producing applied psychophysiology research because most training in research methods do not clearly address applied research
