The Nobel Prizes 2017 Karl Grandin, Eva Windrup, 2020-03-20 The Nobel Prizes is the official yearbook of the Nobel Foundation This edition provides extensive information about the 2017 laureates their Nobel Prize lectures and their autobiographies as well as presentation speeches and background about the Nobel festivities Published on behalf of the Nobel Foundation

Quantum Gravity War Norbert Schwarzer, 2024-04-16 Imagine a civilization with a technology so powerful that a single push of the wrong button could destroy this very entire civilization As the consideration of future warfare requires the inclusion of a unified physics we have to deal with complex concepts of Quantum Theory and General Theory of Relativity The two have to be brought together before we are able to deal with the matter of future warfare technology in a satisfactory manner That such a Theory of Everything or Theory of Quantum Gravity in principle already exists and had been already derived by the great German mathematician David Hilbert When digging deeper and looking for applications of the new theory we realized that many of the new possibilities could also lead to quite disastrous utilizations in military It is futile to hope that mankind would not recognize this potential and restrain itself from its exploitation Thus we thought we better make this knowledge public and hope for some kind of global understanding perhaps guaranteeing the non usage of certain technologies It might only be a weak hope but in observing history and realizing how little we gained by keeping crucial knowledge restricted to some thereby often only even more provoking the development of the most horrific weapons one could imagine at the time we simply see no better way This book does not provide blueprints ready to start the developments of new quantum gravity weaponry and strategies but it draws the line that would suffice to awake the right forces and trigger the best developments before the bad guys get the gist

The Quantization of Gravity Claus Gerhardt, 2018-04-14 A unified quantum theory incorporating the four fundamental forces of nature is one of the major open problems in physics The Standard Model combines electro magnetism the strong force and the weak force but ignores gravity The quantization of gravity is therefore a necessary first step to achieve a unified quantum theory In this monograph a canonical quantization of gravity has been achieved by quantizing a geometric evolution equation resulting in a gravitational wave equation in a globally hyperbolic spacetime Applying the technique of separation of variables we obtain eigenvalue problems for temporal and spatial self adjoint operators where the temporal operator has a pure point spectrum with eigenvalues λ_i and related eigenfunctions while for the spatial operator it is possible to find corresponding eigendistributions for each of the eigenvalues λ_i if the Cauchy hypersurface is asymptotically Euclidean or if the quantized spacetime is a black hole with a negative cosmological constant The hyperbolic equation then has a sequence of smooth solutions which are products of temporal eigenfunctions and spatial eigendistributions Due to this spectral resolution of the wave equation quantum statistics can also be applied to the quantized systems These quantum statistical results could help to explain the nature of dark matter and dark energy

Unified Field Mechanics: Natural Science Beyond The Veil Of

Spacetime - Proceedings Of The Ix Symposium Honoring Noted French Mathematical Physicist Jean-pierre Vigier Richard L Amoroso, Louis H Kauffman, Peter Rowlands, 2015-09-08 Unified Field Mechanics the topic of the 9th international symposium honoring noted French mathematical physicist Jean Pierre Vigier cannot be considered highly speculative as a myopic critic might surmise The 8th Vigier Symposium proceedings The Physics of Reality should in fact be touted as a companion volume because of its dramatic theoretical Field Mechanics in additional dimensionality Many still consider the Planck scale zero point field stochastic quantum foam as the basement of reality This could only be considered true under the limitations of the Copenhagen interpretation of quantum theory As we enter the next regime of Unified Field Mechanics we now know that the energy dependent Einstein Minkowski manifold called spacetime has a finite radius beyond which a large scale multiverse beckons So far a battery of 14 experiments has been designed to falsify the model When the 1st is successfully performed a revolution in Natural Science will occur This volume strengthens and expands the theoretical and experimental basis for that immanent new age

Mathematical Psychology Norbert Schwarzer, 2024-11-28 A drawback of standard approaches to try and understand the world of feelings such as love hate fear and anger plus consciousness via quantum concepts results from the old problem that Quantum Theory does not appear to be fully compatible with Einstein's General Theory of Relativity To overcome these difficulties we explicitly tried to avoid pushing any existing theory into the comprehension of the human mind and all its derivatives On the assumption that everything including consciousness may consist of attributes or properties and subjecting them to a general Hamilton extremal principle we surprisingly ended up in generalized Einstein field equations with the whole ensemble having the characteristics of a Quantum Gravity Theory The field of psychology has lacked a unified theory to support phenomenological observations until now and it took a mathematical physicist to find it With example concepts of group think and quantum gravity based human thought processes given among many more it provides a basis for understanding and mitigating and potentially even preventing socioeconomic debt cycles and war and it shows why love can become the black hole in a universe of feelings

First-stage LISA Data Processing and Gravitational Wave Data Analysis Yan Wang, 2015-12-10 This thesis covers a diverse set of topics related to space based gravitational wave detectors such as the Laser Interferometer Space Antenna LISA The core of the thesis is devoted to the preprocessing of the interferometric link data for a LISA constellation specifically developing optimal Kalman filters to reduce arm length noise due to clock noise The approach is to apply Kalman filters of increasing complexity to make optimal estimates of relevant quantities such as constellation arm length relative clock drift and Doppler frequencies based on the available measurement data Depending on the complexity of the filter and the simulated data these Kalman filter estimates can provide up to a few orders of magnitude improvement over simpler estimators While the basic concept of the LISA measurement Time Delay Interferometry was worked out some time ago this work brings a level of rigor to the processing of the constellation level data products The thesis concludes with some topics related to the eLISA such as a new class of

phenomenological waveforms for extreme mass ratio inspiral sources EMRIs one of the main source for eLISA an octahedral space based GW detector that does not require drag free test masses and some efficient template search algorithms for the case of relatively high SNR signals

On Gravity Anthony Zee, 2020-03-10 Of the four fundamental forces of nature gravity might be the least understood and yet the one with which we are most intimate From the months each of us spent suspended in the womb anticipating birth to the moments when we wait for sleep to transport us to other realities we are always aware of gravity In *On Gravity* physicist A Zee combines profound depth with incisive accessibility to take us on an original and compelling tour of Einstein's general theory of relativity Inspired by Einstein's audacious suggestion that spacetime could ripple Zee begins with the stunning discovery of gravity waves He goes on to explain how gravity can be understood in comparison to other classical field theories presents the idea of curved spacetime and the action principle and explores cutting edge topics including black holes and Hawking radiation Zee travels as far as the theory reaches leaving us with tantalizing hints of the utterly unknown from the intransigence of quantum gravity to the mysteries of dark matter and energy Concise and precise and infused with Zee's signature warmth and freshness of style *On Gravity* opens a unique pathway to comprehending relativity and gaining deep insight into gravity spacetime and the workings of the universe

The Physics of God and the Quantum Gravity Theory of Everything James Redford, 2011-12-19

ABSTRACT Analysis is given of the Omega Point cosmology an extensively peer reviewed proof i.e. mathematical theorem published in leading physics journals by professor of physics and mathematics Frank J Tipler which demonstrates that in order for the known laws of physics to be mutually consistent the universe must diverge to infinite computational power as it collapses into a final cosmological singularity termed the Omega Point The theorem is an intrinsic component of the Feynman DeWitt Weinberg quantum gravity Standard Model Theory of Everything TOE describing and unifying all the forces in physics of which itself is also required by the known physical laws With infinite computational resources the dead can be resurrected never to die again via perfect computer emulation of the multiverse from its start at the Big Bang Miracles are also physically allowed via electroweak quantum tunneling controlled by the Omega Point cosmological singularity The Omega Point is a different aspect of the Big Bang cosmological singularity the first cause and the Omega Point has all the haecceities claimed for God in the traditional religions From this analysis conclusions are drawn regarding the social ethical economic and political implications of the Omega Point cosmology

The Math of Body, Soul, and the Universe Norbert Schwarzer, 2022-12-27 The great German mathematician David Hilbert's creation de facto was no is a theory of everything or world formula even though he himself had little chance of fully realizing this Even in physics where we can now show that Hilbert's fundamental equation covers both great theories General Theory of Relativity and Quantum Theory the time was not ripe for such a discovery simply because the mathematical apparatus of Quantum Theory was not fully developed then While Hilbert brought out his great work in 1915 and knew about the Einstein field equations at the time the basic quantum

equations such as the Schrödinger Klein Gordon and Dirac equations would not follow before the second half of the 1920s In order to find the mathematical and physical fundament for the description of the body the soul and the whole universe which is to say a theory of everything we think that we require quantum gravity That such a theory in principle already exists and was derived by Hilbert and elaborated in the author's previous work *The World Formula A Late Recognition of David Hilbert's Stroke of Genius* This book digs deeper and shows not only that quantum gravity is more than just a physical theory describing physical aspects but also that in fact it covers it all

Foundations of General Relativity Klaas

Landsman, 2021-10-08 This book dedicated to Roger Penrose is a second mathematically oriented course in general relativity It contains extensive references and occasional excursions in the history and philosophy of gravity including a relatively lengthy historical introduction The book is intended for all students of general relativity of any age and orientation who have a background including at least first courses in special and general relativity differential geometry and topology The material is developed in such a way that through the last two chapters the reader may acquire a taste of the modern mathematical study of black holes initiated by Penrose Hawking and others as further influenced by the initial value or PDE approach to general relativity Successful readers might be able to begin reading research papers on black holes especially in mathematical physics and in the philosophy of physics The chapters are Historical introduction General differential geometry Metric differential geometry Curvature Geodesics and causal structure The singularity theorems of Hawking and Penrose The Einstein equations The 3+1 split of space time Black holes I Exact solutions and Black holes II General theory These are followed by two appendices containing background on Lie groups Lie algebras constant curvature and on Formal PDE theory
