The array of topics related to the planning profession challenges urban planning faculty with training students to conduct research. *Research Design in Urban Planning: A Student's Guide* is a much needed introductory textbook, given the current lack of books on research design specifically for planning, compared to social sciences as a whole. It is a practical resource for both master's and PhD levels, providing a comprehensive synthesis of the typical approaches, methods, and issues utilized in graduate student research projects. The book is primarily intended for students who are beginning the process of writing a dissertation and/or to assist faculty or other advisors who may be guiding students through this process. Its intent is to educate readers that thinking through the preliminary questions and decisions made prior to conducting a research project will ultimately advance its quality. With an emphasis on the development of a strong research question, the organization of the book takes the reader through a series of research options and discussions of approaches on how to both build and answer a valid research question.

Farthing uses his background in planning education as a requisite for composing this book. He served as Principal Lecturer in the Department of Planning & Architecture, at University of the West of England, and also taught at the Universities of Melbourne, Curtin, and Murdoch in Australia, the University of Tours in France, and the University of Hannover in Germany. He has conducted a broad range of research in planning on topics such as urban housing policy, small town development, urban regeneration, and European spatial planning. He uses his experience in supervising dissertations and his research background to assist in orchestrating the contents within the book.

The eleven-chapter book begins with an overview of the contents and a brief definition of research design (chapter 1), stating that one third of students' time spent on a dissertation should be devoted to research design. The author rejects the view that only a few standard research designs exist in planning, claiming that each research question merits its own specific approach. This view is framed through a clear dialog on how knowledge is created and interpreted in planning research,

comparing primarily positivist and postpositivist thinking (chapter 2). Farthing then posits that solving problems should be the starting point of any planning-based research. These problems, according to Farthing, should be the basis for developing answerable descriptive or explanatory research questions (chapter 3). The role of the research question is presented as the most important facet to a successful research design. This point is reiterated throughout the book to stress that all portions of the research should be primarily aimed at either formulating or answering a specific inquiry. Farthing justifies this claim by arguing that planning research is highly flexible (and therefore easily criticized), sometimes causing students to lose focus (Singleton, Straits, and Straits 2006). Remaining fixed upon a clear and reasonable research question is stated to help alleviate this condition.

To develop a research question, Farthing presents a straightforward synthesis on how to conduct a proper literature review and identify research gaps (chapter 4). Then the author presents numerous examples of research questions alongside in-depth explanations of how these questions are developed and the methods with which to answer them. Furthermore, he discusses the research scope and sampling approaches for data generation purposes and then provides a discourse on the importance of assumptions and theoretical foundations in planning research (chapters 5 and 6). Moreover, the author uses these assumptions to develop a rationale for reasoning, validity, and reliability when deciding on proper methods for data analysis (chapter 7). Farthing presents a large section on data sources, analytical procedures for assessing data, and limits to utilizing different sources of data (chapter 8), and then uses an identical framework to differentiate quantitative and qualitative research during data analysis. Also, Farthing conducts a lengthy discussion on approaches for ethical research that ensures morality and virtuosity are integrated into the research design process (chapter 9). Finally, he considers issues in cross-national comparative research—the technique of analyzing an event or process that takes place within a country and comparing the way that event or process takes place across many different countries. Farthing effectively uses
