Respiratory Infections:

Respiratory Infections Lionel Mandell, Mark Woodhead, Santiago Ewig, Antoni Torres, 2006-10-27 The aim of the volume is to provide an authoritative and international treatise bringing together current knowledge in the field of respiratory infection. The book will be organised by presentation rather than causative organism a differentiating feature from the existing competition and will be divided into four parts: General Issues, Community acquired Infections, Nosocomial Infections and Respiratory Infection in Immunocompromised Patients. Each chapter will conclude with a summary highlighting practical take home messages regarding patient management for the reader. It will be highly illustrated including colour plates where appropriate. The principal market will be pulmonologists with a specialist interest in this area and infectious disease specialists but that the text will also be of interest to clinical researchers and a useful library reference. **Respiratory**

Infections Sanjay Sethi, 2016-04-19 Utilizing a syndrome based approach *Respiratory Infections* provides pulmonologists, infectious disease specialists and immunologists with essential and thorough knowledge of respiratory infections and the multitude of diseases that make up these infections including pneumonia, tuberculosis, HIV and cystic fibrosis. The only source

The Management of Acute Respiratory Infections in Children World Health Organization, 1995 A step by step guide to the correct management of respiratory infections in infants and young children. Addressed to staff in first level health facilities the book explains how to assess a child, recognize symptoms, classify the illness and provide appropriate treatment, whether involving immediate referral to hospital treatment with antibiotics at home or simple home care. Throughout a special effort is made to help staff distinguish the few very sick children from the many others whose infections can be safely treated at home. The manual also aims to help prevent deaths from pneumonia and other severe illnesses by offering abundant advice on the recognition and urgent management of danger signs. The manual has two parts each based on the use of a quick reference case management chart reproduced in a foldout version. Part one covers the management of pneumonia, wheezing coughs and colds. Advice on how to collect essential information about the signs of respiratory problems is followed by a description of the steps involved in classifying the illness, determining the degree of severity and identifying the appropriate treatment. Part one concludes with detailed treatment instructions including how to give an antibiotic and treat fever and wheezing. Part two explains how to assess, classify and treat the child with an ear problem or sore throat. Treatment instructions include advice on how to dry the ear by wicking, give an antibiotic and manage streptococcal sore throat. Further practical information is provided in a series of annexes which explain how to refer a child to hospital, what to do when referral is not feasible, how to use a rapid acting bronchodilator and how to determine whether complaints and symptoms are due to measles, pertussis or diphtheria. Emerging Respiratory Infections in the 21st Century, An Issue of Infectious Disease Clinics Alimuddin Zumla, Wing-Wai Yew, David S.C. Hui, 2010-09-28 Respiratory infections are among the most common causes of morbidity and mortality worldwide. These infections present a special challenge to physicians for several

reasons including of the recent disasters caused by severe acute respiratory syndrome SARS and bird and swine influenza the increase in viral and bacterial resistance to currently available anti microbial drugs the increased frequency of new viral lung infections in clinical practice and the worldwide emergence of deadly drug resistant forms of TB For these reasons it is important for infectious disease specialists to have an overview of emerging respiratory infections **Secondary**
