Reprogramming The Cerebral Cortex Plasticity Following Central And Peripheral Lesions:

Reprogramming the Cerebral Cortex Stephen Lomber, Jos Eggermont, 2006-10-12 The brain has a remarkable ability to adapt in the event of damage in many cases shifting responsibility for specific cognitive functions to other non damaged brain regions This plasticity can be crucial in aiding recovery from stroke trauma and peripheral damage such as eye or ear damage Over the past thirty years our view of cortical plasticity has evolved greatly Early studies suggested that changes to cortical function due to peripheral lesions could only occur during development and that these plastic changes were specific to a particular temporal window or critical period Over time it has been demonstrated that cortical modifications as a consequence of either peripheral or central lesions can induce adaptive or beneficial changes in cortical function in an effort to preserve or enhance function More recently studies have identified that many of these adaptive changes once thought only possible in the developing brain are also possible in the mature or developed brain At present many laboratories are defining the beneficial capabilities of cerebral cortex plasticity upon which many proactive and therapeutic strategies may be developed in order to maximize the reprogramming capabilities of the cerebrum *Reprogramming the Cerebral Cortex* describes these exciting studies and examines adaptive cortical plasticity in a variety of systems visual auditory somatomotor cross modal language and cognition The book leads the reader through the complexities and promise of neuroplasticity and presents insights into current and future research and clinical practice It is unique in looking at the beneficial capabilities of cerebral cortex plasticity upon which many proactive and therapeutic strategies may be developed The book will be a valuable resource for behavioural systems computational and cognitive neuroscientists as well as clinicians and neuropsychologists

Erxin Scales: Child Developmental Scale of China Chunhua Jin, Zhenmin Gao, Wenwen Liu, 2024-09-20 This book drawing from internationally renowned scales like Bayley and Gesell develops a child developmental assessment scale based on research data from Chinese children It stands as a meticulous creation of the Capital Institute of Pediatrics a national level institution for children s development research in China The scale demonstrates good reliability and validity meeting psychometric standards in various statistical aspects In the revised scale developmental quotients are classified into six levels distributions of percentiles for developmental quotients are provided and screening indices for autism spectrum disorders are added In doing so the revised scale can not only identify developmental delays but also concurrently screen for autism spectrum disorder risks providing a foundational reference for tracking children s developmental status in follow up studies The book holds vital value and significance in fostering communication among scholars from universities and research institutions as well as pediatricians neurologists and rehabilitation specialists in hospitals
