Research Methods in Occupational Epidemiology Harvey Checkoway, 2004 A clear and critical summary of research approaches to the epidemiological study of workplace hazards The book describes the historical development of occupational epidemiology methods for characterizing exposures and techniques for designing and implementing epidemiologic studies in this area

Research Methods in Occupational Epidemiology Harvey Checkoway, Neil Pearce, Douglas J.

Crawford-Brown, 1989-05-25 Occupational epidemiology has emerged as a distinct subdiscipline of epidemiology and occupational medicine addressing fundamental public health and scientific questions relating to the specification of exposure response relationships assessment of the adequacy of occupational exposure guidelines and extrapolation of hazardous effects to other settings This book reviews the wide range of principles and methods used in epidemiologic studies of working populations It describes the historical development of occupational epidemiology the approaches to characterizing workplace exposures and the methods for designing and implementing epidemiologic studies The relative strengths and limitations of different study designs are emphasized Also included are more advanced discussions of statistical analysis the estimation of doses to biological targets and applications of the data derived from occupational epidemiology studies to disease modeling and risk assessment The volume will serve both as a textbook in epidemiology and occupational medicine courses and as a practical handbook for the design implementation and interpretation of research in this field

Statistical Methods in Epidemiology Harold A. Kahn, Christopher T. Sempos, 1989 This book is an expanded version of the Kahn s widely used text *An Introduction to Epidemiologic Methods* Oxford 1983 It provides clear insight into the basic statistical tools used in epidemiology and is written so that those without advanced statistical training can comprehend the ideas underlying the analytical techniques The authors emphasize the extent to which similar results are obtained from different methods both simple and complex To this edition they have added a new chapter on Comparison of Numerical Results for Various Methods of Adjustment and also one on The Primacy of Data Collection New topics include the Kaplan Meier product limit method and the Cox proportional hazards model for analysis of time related outcomes An appendix of data from the Framingham Heart Study is used to illustrate the application of various analytical methods to an identical set of real data and provides source material for student exercises The text has been updated throughout

Michael K. Harris, 2000 **Multivariate Methods in Epidemiology** Theodore R. Holford, 2002-05-30 The basis for much of medical public health practice comes from epidemiological research This text describes current statistical tools that are used

to analyze the association between possible risk factors and the actual risk of disease Beginning with a broad conceptual framework on the disease process it describes commonly used techniques for analyzing proportions and disease rates These are then extended to model fitting and the common threads of logic that bind the two analytic strategies together are revealed Each chapter provides a descriptive rationale for the method a worked example using data from a published study and an exercise that allows the reader to practice the technique Each chapter also includes an appendix that provides further details on the theoretical underpinnings of the method Among the topics covered are Mantel Haenszel methods rates survival analysis logistic regression and generalized linear models Methods for incorporating aspects of study design such as matching into the analysis are discussed and guidance is given for determining the power or the sample size requirements of a study This text will give readers a foundation in applied statistics and the concepts of model fitting to develop skills in the analysis of epidemiological data

Association Models in Epidemiology Hongjie Liu, 2024-08-05 Association Models in Epidemiology Study Designs Modeling Strategies and Analytic Methods is written by an epidemiologist for graduate students researchers and practitioners who will use regression techniques to analyze data It focuses on association models rather than prediction models The book targets students and working professionals who lack bona fide modeling experts but are committed to conducting appropriate regression analyses and generating valid findings from their projects This book aims to offer detailed strategies to guide them in modeling epidemiologic data Features Custom Tailored Models Discover association models specifically designed for epidemiologic study designs Epidemiologic Principles in Action Learn how to apply and translate epidemiologic principles into regression modeling techniques Model Specification Guidance Get expert guidance on model specifications to estimate exposure outcome associations accurately controlling for confounding bias Accessible Language Explore regression intricacies in user friendly language accompanied by real world examples that make learning easier Step by Step Approach Follow a straightforward step by step approach to master strategies and procedures for analysis Rich in Examples Benefit from 120 examples 77 figures 86 tables and 174 SAS outputs with annotations to enhance your understanding Book website located here Crafted for two primary audiences this text benefits graduate epidemiology students seeking to understand how epidemiologic principles inform modeling analyses and public health professionals conducting independent analyses in their work Therefore this book serves as a textbook in the classroom and as a reference book in the workplace A wealth of supporting material is available for download from the book s CRC Press webpage Upon completing this text readers should gain confidence in accurately estimating associations between risk factors and outcomes controlling confounding bias and assessing effect modification

Clinical Epidemiology Noel S. Weiss, 2006 Examining the principles and methods of research on the evaluation of factors affecting the outcome of illness this volume emphasizes diagnostic and therapeutic interventions the factors most readily modified by health care providers The author discusses various ways of structuring observations on patient groups and appraises the nature and strength of inferences drawn from

those observations Weiss also demonstrates how the results of this type of research clinical epidemiologic research can be incorporated into the decision making process utilized in clinical medicine Among other changes this new edition of Clinical Epidemiology greatly expands the chapter on randomized controlled trials and includes a whole new chapter on meta analysis authored by Peter Cummings with Noel S Weiss Meta analysis the statistical synthesis of data from comparable studies was unheard of thirty years ago but with the advent of increased computer technology the method has been steadily growing in importance in the interpretation of the results of patient oriented medical research Clinical Epidemiology is an essential reference guide to the quantitative assessment of the consequences of illness for clinicians in training or in practice

Methods in Observational Epidemiology Jennifer L. Kelsey, 1996 This is the second edition of the first book to provide a complete picture of the design conduct and analysis of observational studies the most common type of epidemiologic study Stressing sample size estimation sampling and measurement error the authors cover the full scope of observational studies describing cohort studies case control studies cross sectional studies and epidemic investigation The use of statistical procedures is described in easy to understand terms Statistical Analysis of Epidemiologic Data Steve Selvin, 2004-05-13 Analytic procedures suitable for the study of human disease are scattered throughout the statistical and epidemiologic literature Explanations of their properties are frequently presented in mathematical and theoretical language This well established text gives readers a clear understanding of the statistical methods that are widely used in epidemiologic research without depending on advanced mathematical or statistical theory By applying these methods to actual data Selvin reveals the strengths and weaknesses of each analytic approach He combines techniques from the fields of statistics biostatistics demography and epidemiology to present a comprehensive overview that does not require computational details of the statistical techniques described For the Third Edition Selvin took out some old material e g the section on rarely used cross over designs and added new material e g sections on frequently used contingency table analysis Throughout the text he enriched existing discussions with new elements including the analysis of multi level categorical data and simple intuitive arguments that exponential survival times cause the hazard function to be constant He added a dozen new applied examples to illustrate such topics as the pitfalls of proportional mortality data the analysis of matched pair categorical data and the age adjustment of mortality rates based on statistical models The most important new feature is a chapter on Poisson regression analysis This essential statistical tool permits the multivariable analysis of rates probabilities and counts
