International Conference on Digital Computer Applications to Process Control M. Mansour,W. Schaufelberger,2013-06-29
 Digital computers have been used more and more to control different industrial processes during the last decade As of today
 many systems are designed to include a process control computer as a vital part The use of computers has created a need
 for sophisticated methods for the operation and supervision of complex industrial processes To summarize the state of the
 art from the practical as well as from the theoretical point of view the 4th IFAC/IFIP International Conference on Digital
 Computer Applications to Process Control will be held at Zurich from March 19 to 22 1974 The first two volumes of the
 proceedings contain the accepted papers submitted to the conference mentioned above The papers are arranged according
 to the topics of the conference A third volume will include the six following survey papers 1 Digital Control Algorithms Prof A

Dynamic Systems Jun Fu,Ruicheng Ma,2020-09-24 This book presents several novel constructive methodologies for global
 stabilization and H_∞ control in switched dynamic systems by using the systems structure information The main
 features of these new approaches are twofold i Novel Lyapunov functions are constructed and new switching strategies are
 designed to guarantee global finite time stabilization of the closed loop switched dynamic systems while ii without posing any
 internal stability requirements on subsystems the standard H_∞ control problem of the switched dynamic systems is
 solved by means of dwell time switching techniques Systematically presenting constructive methods for analyzing and
 synthesizing switched systems the content is of great significance to theoretical research and practical applications involving
 switched systems alike The book provides a unified framework for stability analysis stabilization and H_∞ control of
 switched systems making it a valuable resource for researchers and graduate students who want to learn about the state of
 the art in the analysis and synthesis of switched systems as well as recent advances in switched linear systems In addition it
 offers a wealth of cutting edge constructive methods and algorithm designs for researchers who work with switched dynamic
 systems and graduate students of control theory and control engineering **Programming Languages and Systems**

Universal Semantic Communication Brendan Juba,2011-10-27 Is meaningful communication possible between two intelligent parties who share no common language or background In this work a theoretical framework is proposed in which it is possible to address when and to what extent such semantic communication is possible such problems can be rigorously addressed by explicitly focusing on the goals of the communication Under this framework it is possible to show that for many goals communication without any common language or background is possible using universal protocols This work should be accessible to anyone with an undergraduate level knowledge of the theory of computation The theoretical framework presented here is of interest to anyone wishing to design systems with flexible interfaces either among computers or between computers and their users
