

Thinking and Intelligence

What is Thinking?

Thinking: The mental manipulation of representations of information we encounter in our environments.

- Cognitive psychologists study thought and the understanding that results from thinking

What are Mental Representations?

- **Analogical representations:** Mental representations that have some of the physical characteristics of objects
- **Symbolic representations:** Abstract mental representations that consist of words or ideas

Mental Maps include both analogical and symbolic representations

- Such shortcuts are useful, but they can sometimes lead to errors, because we can represent only a limited range of knowledge.

Schemes Are the Basis of Thinking

Schemes allow categorization of concept

- **Schemas:** Mental structures—collect ideas, prior knowledge, and experience that help organize information and thought and behavior.
- Schemes form as the result of your experiences

When we use a schema to group things based on shared properties, we create a category.

Concept: A mental representation of objects, events, or relations organized around common themes.

Exemplar model of categorization

- **Exemplar model:** A way of thinking about concepts. All concepts in a category are examples (exemplars); together, they form the category
- **Prototype model:** A way of thinking about concepts. Within each category, there is a best example—a prototype—for that category.

Stereotypes

- Schemes that allow for easy, fast processing of information about people, events, or groups, based on their membership in particular groups

Examples

- Race: Black, White, Asian
- Role: Professor, athlete, mortician
- Gender: Male, female, nonbinary

You Use Thinking in Three Ways

Reasoning: Using information to determine if a conclusion is valid or reasonable.

- Informal reasoning: relying on opinions
- Formal reasoning: relying on logical and objective methods

Biased Reasoning

- **Confirmation bias:** people show a strong tendency to pay greater attention to evidence that supports their beliefs and ignore or downplay evidence that does not
- Sullow and colleagues (2019) found that visual attention to news stories on Facebook did not vary by attitude held, but stories selected did
