

3.4.4 b)

Discuss potential further development of the solution.

The final part of your project involves thinking about the scope for future development.

Even though you will not have to make any of the changes that you suggest, it is important that your suggestions are sensible and realistic.

Note that the final bullet point of mark-band 4 of the evaluation mark band, states that...

"There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated."

This means that your suggested improvements should make sense, given the context of the rest of your work.

Below is an example of a suggestion for how the roguelike dungeon crawler project could be developed further:

You may have had to leave a feature out due to time constraints. Is it something you could consider including in the future?

"If I had the opportunity to develop the project further, I would aim to create an algorithm that would produce procedurally generated levels. **This is something I had to leave out of the project, due to the additional time it would have taken.** I would have had to come up with a way of ensuring that the levels generated were suitably balanced and that they didn't contain elements that made them impossible to complete. My brief experimentation with procedural levels created a number of levels that could not be completed due to exits that led nowhere or a poor balance between monsters and power-ups/health drops.

My stakeholders had commented that my current game had little or no longevity once it was completed and procedurally generated levels was the something that they all suggested in the post-development feedback.

In my analysis, I looked at several existing roguelikes that contained this feature so I already know that this is something that would enhance my game significantly."

Referring back to ideas you might have discussed in your analysis, or feedback you had from stakeholders shows that your development ideas are based around sound reasoning.

What you should do in this section:

- Suggest ways in which your project could be developed further
- Ensure that your suggestions are explained in detail and that they show an appropriate line of reasoning
