Jean Stilwell Peccei,2006 Child Language provides a comprehensive overview of language acquisition in children introduces students to key theories and concerns such as innateness the role of input and the relation of language to other cognitive functions teaches students the skills needed to analyze children s language includes sections on the bilingual child and atypical language development provides classic readings by key names in the field such as Brian MacWhinney Richard Cromer Jean Aitchison and Eve Clark The accompanying website to this book can be found at <http://www.routledge.com/textbooks/0415281032> *The Resilience of Language* Susan Goldin-Meadow,2005-04-05 Imagine a child who has never

seen or heard any language at all Would such a child be able to invent a language on her own Despite what one might guess the children described in this book make it clear that the answer to this question is yes The children are congenitally deaf and cannot learn the spoken language that surrounds them In addition they have not yet been exposed to sign language either by their hearing parents or their oral schools Nevertheless the children use their hands to communicate they gesture and those gestures take on many of the forms and functions of language The properties of language that we find in the deaf children s gestures are just those properties that do not need to be handed down from generation to generation but can be reinvented by a child de novo the resilient properties of language This book suggests that all children deaf or hearing come to language learning ready to develop precisely these language properties In this way studies of gesture creation in deaf

children can show us the way that children themselves have a large hand in shaping how language is learned **The
