Out of Thin Air Shawn Boonstra, 2007 *Making Eden* David Beerling, 2019-01-24 Over 7 billion people depend on plants for healthy productive secure lives but few of us stop to consider the origin of the plant kingdom that turned the world green and made our lives possible And as the human population continues to escalate our survival depends on how we treat the plant kingdom and the soils that sustain it Understanding the evolutionary history of our land floras the story of how plant life emerged from water and conquered the continents to dominate the planet is fundamental to our own existence In *Making Eden* David Beerling reveals the hidden history of Earth's sun shot greenery and considers its future prospects as we farm the planet to feed the world Describing the early plant pioneers and their close symbiotic relationship with fungi he examines the central role plants play in both ecosystems and the regulation of climate As threats to plant biodiversity mount today Beerling discusses the resultant implications for food security and climate change and how these can be avoided Drawing on the latest exciting scientific findings including Beerling's own field work in the UK North America and New Zealand and his experimental research programmes over the past decade this is an exciting new take on how plants greened the continents

Origin Story Howard Markel, 2024-06-11 An Economist Best Book of 2024 A lively account of how Darwin's work on natural selection transformed science and society and an investigation into the mysterious illness that plagued its author By early morning of June 30 1860 a large crowd began to congregate in front of Oxford University's brand new Museum of Natural History The occasion was the annual meeting of the British Association for the Advancement of Science and the subject of discussion was Charles Darwin's new treatise fact or fiction Darwin a simultaneously reclusive and intellectually audacious squire from Kent claimed to have solved that mystery of mysteries introducing a logical explanation of the origin of species how they adapted even transmogrified through natural selection At stake on that summer's day of spirited debate was the very foundation of modern biology not to mention the future of the church Without fear of exaggeration Darwin's thesis would forever change our understanding of the life sciences and the natural world And yet the author himself was nowhere to be found in the debate hall instead he was miles away seeking respite from a spate of illnesses that had plagued him for much of his adult life In *Origin Story* medical historian Howard Markel recounts the two year period 1858 to 1860 of Darwin's writing of *On the Origin of Species* through its spectacular success and controversy Simultaneously Markel delves into the mysterious health symptoms Darwin developed combing the literature to emerge with a cogent diagnosis of a case that has long fascinated medical historians The result is a colorful portrait of the man his friends and enemies and his seminal work which resonates to this day

EVOLUTION: A Grand Monument to Human Stupidity Daniel Jappah, 2007-09-01 The theory of evolution has changed so much claiming that humans are closely related genetically to chimps mice donkeys and even fish that the theory is now a blurred mess masquerading as a scientific fact It's a theory built on countless speculations scientific fraud and multiple conflicting theories Garnering the evidence from biology chemistry genetics geology history paleontology and physics evolution is exposed as a racist philosophy and a false science that provided the scientific justification for the Holocaust and other genocides including the plot to silently exterminate American minorities through abortion and birth control The evidence for evolution is examined in the light of genuine science You may not like what you read but you can't argue with the facts

The Mermaid's Tale Kenneth M. Weiss, Anne V. Buchanan, 2009-02-15 While competitive natural selection is widely assumed to be evolution's prime mover Weiss shows how life generally works on the basis of cooperation He reveals that focus on competition and cooperation is largely an artifact of compression of time a distortion that dissolves when life is viewed from developmental and evolutionary time scales
