Biotechnology of Fruit and Nut Crops, 2nd Edition Richard E. Litz, Fernando Pliego-Alfaro, Jose Ignacio

Hormaza, 2020-01-29 This book covers the biotechnology of all the major fruit and nut species. Since the very successful first edition of this book in 2004, there has been rapid progress for many fruit and nut species in cell culture, genomics, and genetic transformation, especially for citrus and papaya. This book covers both these cutting edge technologies and regeneration pathways, protoplast culture, in vitro mutagenesis, ploidy manipulation techniques that have been applied to a wider range of species. Three crop species, *Diospyros kaki* (persimmon), *Punica granatum* (pomegranate), and *Eriobotrya japonica* (loquat) are included for the first time. The chapters are organized by plant family to make it easier to make comparisons and exploitation of work with related species. Each chapter discusses the plant family and the related wild species for 38 crop species and has colour illustrations. It is essential for scientists and post graduate students who are engaged in the improvement of fruit and plantation crops.

Handbook of Major Palm Pests Victoria Soroker, Stefano Colazza, 2017-01-11 Handbook of Major Palm Pests: Biology and Management contains the most comprehensive and up to date information on the red palm weevil and the palm borer moth, two newly emergent invasive palm pests which are adversely affecting palm trees around the world. It provides state of the art scientific information on the ecology, biology, and management of palm pests from a global group of experts in the field. An essential compendium for anyone working with or studying palms, it is dedicated to the detection, eradication, and containment of these invasive species which threaten the health and very existence of global palm crops.

Etiology and Integrated Management of Economically Important Fungal Diseases of Ornamental Palms Imran Ul

Haq, Siddra Ijaz, 2020-11-10 Palms are monocots, Angiosperms belonging to the family Palmae. Arecaceae, perennials having woody stems. Palmae Arecaceae family comprised of about six subfamilies, 200 genera and 2 700 species that are distributed all over the tropical, subtropical, and Mediterranean landscape. Palms are diverse ecologically and morphologically, a group of plants. Ornamental palms are an important component of landscape as well as interiorscapes. Additionally, these plants are a good source of food, feed, and shelter with numerous other commercial benefits. Likewise, other trees and crops, landscape and field nurseries of palms are also subjected to various threats of insect pest and diseases caused by different plant pathogens. Amongst fungal diseases, leaf spots, leaf blights, Fusarium wilts, butt rots, bud rots, root rots, lethal yellowing, and decline of palms are major growth constraints of palm growth. In developing countries, very little attention has been paid on the etiology and management of these fungal diseases on ornamental palms. Accurate diagnosis and reliable management plan of palm fungal diseases usually requires expertise in both modern and advanced plant pathological approaches. Historically, it was general belief that plant pathogens are not associated with human diseases. Since 19th century, several clinical reports are available indicating many plant pathogenic fungi: *Aspergillus* spp, *Penicillium* spp, *Alternaria* spp, *Trichoderma* spp, *Fusarium* spp, *Curvularia* spp, and *Colletotrichum* spp as novel agents of human diseases. Besides the association of fungal plant pathogens infecting ornamental palms harbouring any of earlier mentioned or other fungal species capable of causing certain

diseases in human beings or pets by the ornamental palms cultivation either grown indoor or outdoor is an important area of research to be explored and addressed thoroughly This book will provide the deep information regarding major fungal diseases of ornamental palms their symptoms disease identification and etiology and management strategies This book will also provide unique knowledge regarding the ornamental palms harbouring kinds of human fungal pathogens and their practical management at domestic and commercial scale in order to make cultivation of these plant more beneficial for humans animals and environment
