Out Time Consequences Non Standard Springerbriefs:

Out of Time Kadri Täht, Melinda Mills, 2015-12-14 This pioneering work aims at understanding the impact of non standard evening night weekend working time on family cohesion meaning parent child interaction partnership quality and divorce or partnership dissolution Out of time the Consequences of Non standard Employment Schedules for Family Cohesion is the first work to treat this important topic in a cross national comparative way by using data from two large comparable surveys The impact of work in non standard schedules on workers can be divided into individual and social consequences Research so far has shown the clear individual effects of these schedules such as increased stress levels and sleeping and physical disorders There is less clarity about social consequences Either no or positive effects of these types of schedules on workers and their families are found or a significant negative impact on the relations between the workers and others especially other members of the family is shown in research results This Brief compares the Netherlands and the United States of America countries that both show a high prevalence of non standard schedule work whereas both operate in very different institutional and welfare regime settings of working time regulation By combining both quantitative and qualitative data the authors are able to provide generalized views of comparative surveys and challenging those generalizations at the same time thus enabling the reader to get a better understanding and more balanced view of the actual relationship between non standard employment schedules and family cohesion *Non-Dissipative Effects in Nonequilibrium Systems* Christian Maes, 2017-09-20 This book introduces and discusses both the fundamental aspects and the measurability of applications of time symmetric kinetic quantities outlining the features that constitute the non dissipative branch of non equilibrium physics These specific features of non equilibrium dynamics have largely been ignored in standard statistical mechanics texts This introductory level book offers novel material that does not take the traditional line of extending standard thermodynamics to the irreversible domain It shows that although stationary dissipation is essentially equivalent with steady non equilibrium and ubiquitous in complex phenomena non equilibrium is not determined solely by the time antisymmetric sector of energy entropy considerations While this should not be very surprising this book provides timely simple reminders of the role of time symmetric and kinetic aspects in the construction of non equilibrium statistical mechanics Food Freezing and Thawing Calculations Q. Tuan Pham, 2014-04-16 Freezing time and freezing heat load are the two most important factors determining the economics of food freezers This Brief will review and describe the principal methods available for their calculation The methods can be classified into analytical methods which rely on making physical simplifications to be able to derive exact solutions empirical methods which use regression techniques to derive simplified equations from experimental data or numerical calculations and numerical methods which use computational techniques such as finite elements analysis to solve the complete set of equations describing the physical process The Brief will evaluate the methods against experimental data and develop guidelines on the choice of method Whatever technique is

used the accuracy of the results depends crucially on the input parameters such as the heat transfer coefficient and the product's thermal properties. In addition, the estimation methods and data for these parameters will be reviewed and their impacts on the calculations will be evaluated. Freezing is often accompanied by mass transfer, moisture loss, solute absorption, supercooling and nucleation and may take place under high pressure conditions; therefore, methods to take these phenomena into account will also be reviewed.

Cycling to Work Patrick R  rat, 2020-12-07 This book presents a thorough discussion of utility cycling in the urban environment and everyday mobility. It is based on a large survey answered by 14 000 participants in the bike to work action in Switzerland and quantifies the various dimensions of utility cycling. It proposes an innovative theoretical framework to analyse and understand the various dimensions of the uses of bikes and their diversity. It addresses the factors that motivate commuters to get on their bike and highlights the barriers to this practice between deficient infrastructures and lack of legitimacy. This research makes a diagnosis and discusses the way to develop this sustainable mode of transportation. By combining quantitative results in the form of tables, figures and maps and including qualitative results in the form of quotations from survey participants, this book provides a thorough and enjoyable read. It will be of interest to researchers, policy makers, advanced students in the field of urban planning, social sciences and transportation.

Managing the Continuum: Certainty, Uncertainty, Unpredictability in Large Engineering Projects Franco Caron, 2013-05-24 The brief will describe how to develop a risk analysis applied to a project through a sequence of steps: risk management planning, risk identification, risk classification, risk assessment, risk quantification, risk response planning, risk monitoring and control, process close out and lessons learning. The project risk analysis and management process will be applied to large engineering projects in particular related to the oil and gas industry. The brief will address the overall range of possible events affecting the project, moving from certainty (project issues) through uncertainty (project risks) to unpredictability (unforeseeable events), considering both negative and positive events. Some quantitative techniques (simulation, event tree, Bayesian inference, etc.) will be used to develop risk quantification. The brief addresses a typical subject in the area of project management with reference to large engineering projects concerning the realization of large plants and infrastructures. These projects are characterized by a high level of change, uncertainty, complexity and ambiguity. The brief represents an extension of the material developed for the course Project Risk Analysis and Management of the Master in Strategic Project Management Erasmus Mundus developed jointly by Politecnico di Milano, Heriot Watt University Edinburgh and Ume   Sweden. The brief may be used both in courses addressing project management subjects and by practitioners as a guide for developing an effective project risk management plan.

Innovation and Regional Technological Convergence Tomasz Kijek, Arkadiusz Kijek, Anna Matras-Bolibok, 2023-02-06 This open access book explores the role of innovation in technological convergence processes in the EU regional space and shifts the focus from absolute and conditional income convergence to technological convergence and its determinants. Presenting new theoretical

and empirical evidence on the determinants and trajectory of the EU region's development and convergence this book will appeal to scholars of economics and regional science as well as practitioners and policymakers interested in the policy implications of regional technological convergence The presented findings will also contribute to the development of the knowledge based economy paradigm in the regional context This is an open access book *The Recurrence of COVID-19 in New York State and New York City* Deborah Wallace,Rodrick Wallace,2022-01-01 As a follow up to COVID 19 in New York City an Ecology of Race and Class Oppression which showed that decades of discriminatory public policies shaped the Bronx into the epicenter of the first wave of COVID 19 this book examines the build up to the crest and subsequent ebbing of the second wave of COVID 19 across the 62 counties of New York State NYS and 152 ZIP Code areas of the four central boroughs of New York City NYC Like its predecessor the sequel examines the vulnerabilities that give rise to spikes in infection rates that form epicenters Unlike the first wave NYC was not the epicenter of the second wave high incident counties just outside NYS formed an extended initial epicenter and exported COVID 19 to neighboring counties of NYS Rural NYS counties differed significantly from urban ones socioeconomically and in infection rates during the cresting period Before the crest no socioeconomic factor was associated with county infection rates rather the major associating factor was political and cultural percent of the 2020 vote garnered by Trump Rural counties voted heavily for Trump This association disappeared post crest by mid January 2021 In NYC the Bronx again behaved like a single high incidence entity unlike the other three boroughs that had patches of high and low infection incidence Among the topics covered The Second COVID Wave Washes Over New York State The Second Wave Storm Surges Across New York City Discussion of County Data from the Second Wave of COVID 19 Parsing Meaning From the 152 ZIP Code Data The book closes with a prescription for pandemic response planning based on empowered communities and workers interacting with health departments as equals The Recurrence of COVID 19 in New York State and New York City is a valuable resource for social epidemiologists public health researchers of health disparities those in public service tasked with addressing these problems and infectious disease scientists who focus on spread in human populations of new zoonotic diseases The brief also will find readership among students in these fields civil rights scholars science writers medical anthropologists and sociologists medical and public health historians public health economists and public policy scientists Crosstalk in Modern On-Chip Interconnects B.K. Kaushik,V. Ramesh Kumar,Amalendu Patnaik,2016-04-06 The book provides accurate FDTD models for on chip interconnects covering most recent advancements in materials and design Furthermore depending on the geometry and physical configurations different electrical equivalent models for CNT and GNR based interconnects are presented Based on the electrical equivalent models the performance comparison among the Cu CNT and GNR based interconnects are also discussed in the book The proposed models are validated with the HSPICE simulations The book introduces the current research scenario in the modeling of on chip interconnects It presents the structure properties and characteristics of

graphene based on chip interconnects and the FDTD modeling of Cu based on chip interconnects The model considers the non linear effects of CMOS driver as well as the transmission line effects of interconnect line that includes coupling capacitance and mutual inductance effects In a more realistic manner the proposed model includes the effect of width dependent MFP of the MLGNR while taking into account the edge roughness

The Sudoku Effect: Universities in the Vicious Circle of Bureaucracy Stefan Kühl, 2014-03-12 This book shows that the introduction of the European Credit Transfer System ECTS of credit points as a new accounting unit at universities has led to increased bureaucracy and the schoolmaster style regimentation of Bachelor s and Master s courses It explains how due to the pressure of having to plan every single working hour of studying in advance a Sudoku Effect is created by the necessity to combine courses exams and modules in such a way that the points add up An unintentional side effect of the introduction of the ECTS the Sudoku Effect has led to more classroom style teaching an inflation of exams and fewer choices available to students It has resulted in such complex and contradictory guidelines for the planning of the curriculum that the values attributed to the higher education reform can often only be realised if the rules for Bachelor s and Master s programmes are ignored or at least stretched in practice The book describes how the reaction to this situation is the continuous further refinement of the complicated rules rather than their abolishment

The Legibility of Serif and Sans Serif Typefaces John T. E. Richardson, 2022-02-15 This open access book provides a detailed and up to date account of the relevant literature on the legibility of different kinds of typefaces which goes back over 140 years in the case of reading from paper and more than 50 years in the case of reading from screens It describes the origins of serif and sans serif styles in ancient inscriptions their adoption in modern printing techniques and their legibility in different situations and in different populations of readers It also examines recent research on the legibility of serif and sans serif typefaces when used with internet browsers smartphones and other hand held devices The book investigates the difference in the legibility of serif typefaces and sans serif typefaces when they are used to produce printed material or when they are used to present material on computer monitors or other screens and it explores the differences in readers preferences among typefaces The book s main focus is on the psychology of reading but there are clear implications for education and publishing Indeed the book can be read with benefit by anyone concerned with communicating with others through written text whether it is printed on paper or displayed on computer screens
