

"Outliers" Test Study Guide 2024 with complete solution

Introduction - In the introduction to *Outliers: The Story of Success*, Malcolm Gladwell begins by giving the definition of the word outlier as a person, situation, or thing that is different from others. This definition of something that is markedly different from the normal or the average is the foundational principle of his book. Gladwell studies people and situations that are above average or that stand out from the norm, and he looks into all of the different factors that played a role in creating their success.

To explain the concept of an outlier in more depth, Gladwell describes the people of an Italian village named Roseto Valfortore. Many of these Italians emigrated and ended up all living in the same small town in Pennsylvania, which they named Roseto. Over time, they remained a close-knit community, closed off from the rest of the world for the most part.

What is interesting about their community in Pennsylvania is that hardly any of the men in the city suffer from heart disease. This was discovered in the 1950s when a doctor, Stewart Wolf, was traveling in the area. One of the local physicians told him that he rarely saw anyone from the small town of Roseto for heart disease. This intrigued Wolf, who then did extensive studies on the people of the town including their physical makeup, culture, lifestyle, and all other possible factors that could play a role in heart disease. What the physician discovered was quite interesting: people in the town right next to Roseto suffered from normal levels of heart disease, as did people who moved away from Roseto. Also, the Rosetans did not eat healthily, exercise much, or have very active lifestyles. Despite all of these factors, the Rosetan community still had hardly any heart disease. Wolf concluded that their lack of heart disease was caused by their attitude and lifestyle. The

Chapter 1 - The Matthew Effect - Gladwell begins by quoting a verse from the Bible that states that those who have will be given more while those who have not will lose that which they had. Throughout the chapter, Gladwell describes certain advantages sports players and children in school have simply because of their birth dates. They happened to be born in an advantageous part of the year, and that time of birth led them to have certain advantages that spiraled upwards from that point on.

Gladwell explains a rather unique statistic: of players in Canadian professional hockey leagues, 40% were born between January and March, 30% between April and June, 20% between July and September, and only 10% between October and December. The explanation for this unusual statistic is simple: in Canada, the cut-off birth date for trying out for hockey leagues is January 1st. So, if you turn ten on January 1, you are going to be a lot bigger, physically more mature, and more coordinated than a child who turns
