Modeling A Ships Ferromagnetic Signatures Synthesis Lectures On Computational Electromagnetics S:

Modeling a Ship's Ferromagnetic Signatures John J. Holmes, 2022-05-31 Ferromagnetic models of ships and submarines that predict or reproduce their magnetic signatures have found applications in the development of both offensive and defensive military systems from World War II to the present The mathematical basis of generalized coordinate systems will be presented and demonstrated with example applications to analytic spherical and prolate spheroidal magnetic ship models In addition the advantages and pitfalls of using complex finite element and boundary element numerical techniques to predict high order near field ship signatures will be discussed followed by a short description of the design and testing of complementary physical scale models Extrapolation of measured magnetic signatures from testing environments to threat areas using semi empirical math models will be presented along with an explanation of their inherent instabilities and methods for regularizing them These magnetic ship signature modeling techniques are used today in designing optimized signature reduction systems that have a minimum impact on ships and their systems The discussion will be closed with an important discussion of the verification and validation of magnetic models of surface ships and submarines

Reduction of a Ship's Magnetic Field Signatures John Holmes, 2008-10-08 Decreasing the magnetic field signature of a naval vessel will reduce its susceptibility to detonating naval influence mines and the probability of a submarine being detected by underwater barriers and maritime patrol aircraft Both passive and active techniques for reducing the magnetic signatures produced by a vessel's ferromagnetism roll induced eddy currents corrosion related sources and stray fields are presented Mathematical models of simple hull shapes are used to predict the levels of signature reduction that might be achieved through the use of alternate construction materials Also the process of demagnetizing a steel hulled ship is presented along with the operation of shaft grounding systems paints and alternate configurations for power distribution cables In addition active signature reduction technologies are described such as degaussing and deamping which attempt to cancel the fields surrounding a surface ship or submarine rather than eliminate its source Table of Contents Introduction Passive Magnetic Silencing Techniques Active Signature Compensation Summary

International Aerospace Abstracts, 1999

Exploitation Of A Ship's Magnetic Field Signatures John J. Holmes, 2006 Surface ship and submarine magnetic field signatures have been exploited for over 80 years by naval influence mines and both underwater and airborne surveillance systems The generating mechanism of the four major shipboard sources of magnetic fields is explained along with a detailed description of the induced and permanent ferromagnetic signature characteristics A brief historical summary of magnetic naval mine development during World War II is followed by a discussion of important improvements found in modern weapons including an explanation of the damage mechanism for non contact explosions A strategy for selecting an optimum mine actuation threshold is given A multi layered defensive strategy against naval mines is outlined with graphical explanations of the relationships between ship signature reduction and minefield clearing effectiveness In addition to a brief

historical discussion of underwater and airborne submarine surveillance systems and magnetic field sensing principles mathematical formulations are presented for computing the expected target signal strengths and noise levels for several barrier types Besides the sensor self noise equations for estimating geomagnetic ocean surface wave platform and vector sensor motion noises will be given along with simple algorithms for their reduction *Exploitation of a Ship's Magnetic Field Signatures* John Holmes, 2024-02-15 *Exploitation of a Ship's Magnetic Field Signatures* by John Holmes is a groundbreaking exploration of naval technology and strategic warfare Holmes delves into the intricate realm of magnetic field signatures emanating from ships unraveling their implications for military operations and defense systems The book meticulously examines how adversaries can exploit these magnetic signatures for tactical advantage or to devise countermeasures Holmes with authoritative expertise offers insights into the implications for naval tactics submarine warfare and the development of magnetic signature mitigation technologies This work stands as an indispensable guide for naval professionals defense analysts and technology enthusiasts providing a thorough understanding of the nuanced interplay between magnetic fields and maritime security As a seminal contribution to the field Holmes work navigates the complex waters of magnetic signature exploitation making it a must read for anyone seeking a deeper comprehension of naval strategy and modern defense mechanisms
