Simulation - Past, Present and Future Richard Zobel, 1998 *Guide to Wireless Ad Hoc Networks* Sudip Misra, Isaac Woungang, Subhas Chandra

Misra,2009-03-02 Overview and Goals Wireless communication technologies are undergoing rapid advancements The past few years have experienced a steep growth in research in the area of wireless ad hoc networks The attractiveness of ad hoc networks in general is attributed to their characteristics features such as ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or a switch These features help to set up a network fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations Even though ad hoc networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to scalability quality of service energy efficiency and security

Calibration of Watershed Models Qingyun Duan,Hoshin V. Gupta,Soroosh Sorooshian,Alain N. Rousseau,Richard Turcotte,2003-01-10

Published by the American Geophysical Union as part of the Water Science and Application Series Volume 6 During the past four decades computer based mathematical models of watershed hydrology have been widely used for a variety of applications including hydrologic forecasting hydrologic design and water resources management These models are based on general mathematical descriptions of the watershed processes that transform natural forcing e.g rainfall over the landscape into response e.g runoff in the rivers The user of a watershed hydrology model must specify the model parameters before the model is able to properly simulate the watershed behavior
