Mobile Intelligence Wiley Series On Parallel And Distributed Computing:

High-Performance Computing Laurence T. Yang, Minyi Guo, 2006-01-24 The state of the art of high performance computing Prominent researchers from around the world have gathered to present the state of the art techniques and innovations in high performance computing HPC including Programming models for parallel computing graph oriented programming GOP OpenMP the stages and transformation SAT approach the bulk synchronous parallel BSP model Message Passing Interface MPI and Cilk Architectural and system support featuring the code tiling compiler technique the MigThread application level migration and checkpointing package the new prefetching scheme of atomicity a new receiver makes right data conversion method and lessons learned from applying reconfigurable computing to HPC Scheduling and resource management issues with heterogeneous systems bus saturation effects on SMPs genetic algorithms for distributed computing and novel task scheduling algorithms Clusters and grid computing design requirements grid middleware distributed virtual machines data grid services and performance boosting techniques security issues and open issues Peer to peer computing P2P including the proposed search mechanism of hybrid periodical flooding HPF and routing protocols for improved routing performance Wireless and mobile computing featuring discussions of implementing the Gateway Location Register GLR concept in 3G cellular networks maximizing network longevity and comparisons of QoS aware scatternet scheduling algorithms High performance applications including partitioners running Bag of Tasks applications on grids using low cost clusters to meet high demand applications and advanced convergent architectures and protocols High Performance Computing Paradigm and Infrastructure is an invaluable compendium for engineers IT professionals and researchers and students of computer science and applied mathematics

Smart Environments Diane Cook, Sajal Kumar Das, 2004-10-28 Smart Environments contains contributions from leading researchers describing techniques and issues related to developing and living in intelligent environments Reflecting the multidisciplinary nature of the design of smart environments the topics covered include the latest research in smart environment philosophical and computational architecture considerations network protocols for smart environments intelligent sensor networks and powerline control of devices and action prediction and identification

Fundamentals of Computer Organization and Architecture Mostafa Abd-El-Barr, Hesham El-Rewini, 2005-02-08 This is the first book in the two volume set offering comprehensive coverage of the field of computer organization and architecture This book provides complete coverage of the subjects pertaining to introductory courses in computer organization and architecture including Instruction set architecture and design Assembly language programming Computer arithmetic Processing unit design Memory system design Input output design and organization Pipelining design techniques Reduced Instruction Set Computers RISCs The authors who share over 15 years of undergraduate and graduate level instruction in computer architecture provide real world applications examples of machines case studies and practical experiences in each chapter

Big Data Kuan-Ching Li, Hai Jiang, Laurence T. Yang, Alfredo Cuzzocrea, 2015-02-23 As today s

organizations are capturing exponentially larger amounts of data than ever now is the time for organizations to rethink how they digest that data Through advanced algorithms and analytics techniques organizations can harness this data discover hidden patterns and use the newly acquired knowledge to achieve competitive advantages Pre The Data Bonanza Malcolm Atkinson,Rob Baxter,Peter Brezany,Oscar Corcho,Michelle Galea,Mark Parsons,David Snelling,Jano van Hemert,2013-03-19 Complete guidance for mastering the tools and techniques of the digital revolution With the digital revolution opening up tremendous opportunities in many fields there is a growing need for skilled professionals who can develop data intensive systems and extract information and knowledge from them This book frames for the first time a new systematic approach for tackling the challenges of data intensive computing providing decision makers and technical experts alike with practical tools for dealing with our exploding data collections Emphasizing data intensive thinking and interdisciplinary collaboration The Data Bonanza Improving Knowledge Discovery in Science Engineering and Business examines the essential components of knowledge discovery surveys many of the current research efforts worldwide and points to new areas for innovation Complete with a wealth of examples and DISPEL based methods demonstrating how to gain more from data in real world systems the book Outlines the concepts and rationale for implementing data intensive computing in organizations Covers from the ground up problem solving strategies for data analysis in a data rich world Introduces techniques for data intensive engineering using the Data Intensive Systems Process Engineering Language DISPEL Features in depth case studies in customer relations environmental hazards seismology and more Showcases successful applications in areas ranging from astronomy and the humanities to transport engineering Includes sample program snippets throughout the text as well as additional materials on a companion website The Data Bonanza is a must have guide for information strategists data analysts and engineers in business research and government and for anyone wishing to be on the cutting edge of data mining machine learning databases distributed systems or large scale computing

Grid Computing Fran Berman,Geoffrey Fox,Anthony J. G. Hey,2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can t be approached without an enormous amount of computing power 3 Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective A number of corporations professional groups university consortiums and other groups have developed or are developing frameworks and software for managing grid computing projects The European Community EU is sponsoring a project for a grid for high energy physics earth observation and biology applications In the United States the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people Sun Microsystems offers Grid Engine software Described as a distributed resource management tool Grid Engine allows engineers at companies like

Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time the Grid is a very hot topic generating broad interest from research and industry e g IBM Platform Avaki Entropia Sun HP Grid architecture enables very popular e Science projects like the Genome project which demand global interaction and networking In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state of the art guide in grid computing This is essential reading for researchers in Computing and Engineering physicists statisticians engineers and mathematicians and IT policy makers *An Integrated Formal Task Specification Method for Smart Environments* Maik Wurdel,2011 This thesis is concerned with the development of interactive systems for smart environments One of the characteristic of smart environments is the need to support different interaction paradigms at runtime On the one hand interaction is performed explicitly the user performs an action in order to interact with the system e g pressing a button to adjust the light On the other hand actions of the user are interpreted by the smart environment even though they have not been performed primarily to interact with the system implicit interactions e g walking to the speaker s desk to give a talk A smart environment tries to infer those interactions to assist the user in her work e g display slides at the projection canvas Both interaction paradigms originate from different research fields and are currently treated independently although implicit and explicit interaction mutually influence each other and occur interleaved The thesis introduces a task modeling language in order to cope with the given requirements of smart environments which can be used to perform interaction development for smart environments in a model based fashion for both interaction paradigms **Advances in Human-Robot Interaction** Vladimir Kulyukin,2009-12-01 Rapid advances in the field of robotics have made it possible to use robots not just in industrial automation but also in entertainment rehabilitation and home service Since robots will likely affect many aspects of human existence fundamental questions of human robot interaction must be formulated and if at all possible resolved Some of these questions are addressed in this collection of papers by leading HRI researchers

Context-Aware Systems and Applications Phan Cong Vinh,Abdur Rakib,2022-01-06 This book constitutes the refereed post conference proceedings of the International Conference on Context Aware Systems and Applications held in October 2021 Due to COVID 19 pandemic the conference was held virtually The 25 revised full papers presented were carefully selected from 52 submissions The papers cover a wide spectrum of modern approaches and techniques for smart computing systems and their applications **Computational Collective Intelligence** Tadeusz M. Szuba,2001-03-07 Introducing a groundbreaking approach to understanding measuring and applying Collective Intelligence Does Collective Intelligence CI exist and if so how can it be characterized quantified and harnessed Questions such as these continue to be hotly debated within both the scientific and philosophical communities Yet few researchers working in the fields of artificial intelligence or distributed computing doubt CI s enormous potential value to the future of computing Unfortunately for lack of a rigorous

formal theory of Collective Intelligence most attempts to analyze CI systems have been disappointing at best In Computational Collective Intelligence Professor Tadeusz Szuba does much to rectify that situation by developing for the first time both a formal definition of CI and practical guidelines for its assessment and applications Working from the ground up Dr Szuba begins with a stimulating and insightful discussion of the types of intelligence including individual artificial and collective into which he brings ideas from AI information theory and distributed computing as well as psychology sociology animal behavior cognitive science and other relevant disciplines He tackles the problem of computational models for simulating and measuring CI He explores all theoretically feasible models of CI computations and presents a groundbreaking nondeterministic approach using the Random PROLOG Processor RPP as a CI modeling and evaluation tool He then introduces the Collective Intelligence Quotient IQS and develops clear cut guidelines for measuring it In the final chapters he lays the foundation for a dynamic new discipline Collective Intelligence Engineering CIE and considers its potential applications as an organizational restructuring tool
