Modeling Complex Systems Graduate Texts In Contemporary Physics:

Modeling Complex Systems Nino Boccara, 2014-01-15 *Modeling Complex Systems* Nino Boccara, 2010-09-09 This book illustrates how models of complex systems are built up and provides indispensable mathematical tools for studying their dynamics This second edition includes more recent research results and many new and improved worked out examples and exercises Artificial Intelligence Resources in Control and Automation Engineering Evelio J. González, Alberto F. Hamilton Castro, Leopoldo Acosta Sánchez, 2012 This e book focuses on the application of artificial intelligence resources in fields related to Control and Automation Engineering Techniques such as neural networks fuzzy logic and expert systems are a key tool for researchers and engineers requiring *Modelling Human-Flood Interactions* Yared Abayneh Abebe, 2021-02-25 The negative impacts of floods are attributed to the extent and magnitude of a flood hazard and the vulnerability and exposure of natural and human elements In flood risk management FRM studies it is crucial to model the interaction between human and flood subsystems across multiple spatial temporal and organizational scales Models should address the heterogeneity that exists within the human subsystem and incorporate institutions that shape the behaviour of individuals Hence the main objectives of the dissertation are to develop a modelling framework and a methodology to build holistic models for FRM and to assess how coupled human flood interaction models support FRM policy analysis and decision making To achieve the objectives the study introduces the Coupled fLood Agent Institution Modelling framework CLAIM CLAIM integrates actors institutions the urban environment hydrologic and hydrodynamic processes and external factors which affect FRM activities The framework draws on the complex system perspective and conceptualizes the interaction of floods humans and their environment as drivers of flood hazard vulnerability and exposure The human and flood subsystems are modelled using agent based models and hydrodynamic models respectively The two models are dynamically coupled to understand human flood interactions and to investigate the effect of institutions on FRM policy analysis **Advances in Knowledge-based and Intelligent Information and Engineering Systems** Manuel Graña, 2012 In this 2012 edition of *Advances in Knowledge Based and Intelligent Information and Engineering Systems* the latest innovations and advances in Intelligent Systems and related areas are presented by leading experts from all over the world The 228 papers that are included cover a wide range of topics One emphasis is on Information Processing which has become a pervasive phenomenon in our civilization While the majority of Information Processing is becoming intelligent in a very broad sense major research in Semantics Artificial Intelligence and Knowledge Engineering supports the domain specific applications that are becoming more and more present in our everyday living Ontologies play a major role in the development of Knowledge Engineering in various domains from Semantic Web down to the design of specific Decision Support Systems Research on Ontologies and their applications is a highly active front of current Computational Intelligence science that is addressed here Other subjects in this volume are modern Machine Learning Lattice Computing and Mathematical Morphology The wide scope and high quality of these

contributions clearly show that knowledge engineering is a continuous living and evolving set of technologies aimed at improving the design and understanding of systems and their relations with humans

Declarative Agent Languages and Technologies V Matteo Baldoni, Tran Cao Son, M. Birna van Riemsdijk, Michael Winikoff, 2008-01-29 This book constitutes the thoroughly refereed post workshop proceedings of the 5th International Workshop on Declarative Agent Languages and Technologies DALT 2007 held in Honolulu USA in 2007 It was an associated event of AAMAS 2007 the conference on autonomous agents and multi agent systems The 11 full papers together with 1 keynote lecture and 2 invited papers from the AAMAS main conference were carefully selected and substantially enhanced after the workshop

Service Orientation in Holonic and Multi-Agent Manufacturing and Robotics Theodor Borangiu, Damien Trentesaux, Andre Thomas, 2014-01-30 This volume gathers the peer reviewed papers which were presented at the third edition of the International Workshop Service Orientation in Holonic and Multi agent Manufacturing and Robotics SOHOMA 13 organized on June 20 22 2013 by the Centre of Research in Computer Integrated Manufacturing and Robotics CIMR Bucharest and hosted by the University of Valenciennes France The book is structured in five parts each one covering a specific research domain which represents a trend for modern manufacturing control Distributed Intelligence for Sustainable Manufacturing Holonic and Multi Agent Technologies for Manufacturing Planning and Control Service Orientation in Manufacturing Management and Control Intelligent Products and Product driven Automation and Robotics for Manufacturing and Services These five evolution lines have in common concepts related to service orientation in a distributed planning and control agent based industrial environment today it is generally recognized that the Service Oriented Enterprise Architecture paradigm has been looked upon as a suitable and effective approach for industrial automation and management of manufacturing enterprises

Laser Cooling and Trapping Harold J. Metcalf, Peter van der Straten, 2012-12-06 Laser cooling is a relatively new technique that has led to insights into the behavior of atoms as well as confirming with striking detail some of the fundamental notions of quantum mechanics such as the condensation predicted by S N Bose This elegant technique whereby atoms molecules and even microscopic beads of glass are trapped in small regions of free space by beams of light and subsequently moved at will using other beams provides a useful research tool for the study of individual atoms and clusters of atoms for investigating the details of chemical reactions and even for determining the physical properties of individual macromolecules such as synthetic polymers and DNA Intended for advanced undergraduates and beginning graduate students who have some basic knowledge of optics and quantum mechanics this text begins with a review of the relevant results of quantum mechanics it then turns to the electromagnetic interactions involved in slowing and trapping atoms and ions in both magnetic and optical traps The concluding chapters discuss a broad range of applications from atomic clocks and studies of collision processes to diffraction and interference of atomic beams at optical lattices and Bose Einstein condensation

A Framework for Assessing Effects of the Food System

National Research Council, Institute of Medicine, Board on Agriculture and Natural Resources, Food and Nutrition Board, Committee on a Framework for Assessing the Health, Environmental, and Social Effects of the Food System, 2015-06-17

How we produce and consume food has a bigger impact on Americans well being than any other human activity The food industry is the largest sector of our economy food touches everything from our health to the environment climate change economic inequality and the federal budget From the earliest developments of agriculture a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy active life Over time food production processing marketing and consumption have evolved and become highly complex The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social economic ecological and evolutionary factors Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address A Framework for Assessing Effects of the Food System develops an analytical framework for assessing effects associated with the ways in which food is grown processed distributed marketed retailed and consumed in the United States The framework will allow users to recognize effects across the full food system consider all domains and dimensions of effects account for systems dynamics and complexities and choose appropriate methods for analysis This report provides example applications of the framework based on complex questions that are currently under debate consumption of a healthy and safe diet food security animal welfare and preserving the environment and its resources A Framework for Assessing Effects of the Food System describes the U S food system and provides a brief history of its evolution into the current system This report identifies some of the real and potential implications of the current system in terms of its health environmental and socioeconomic effects along with a sense for the complexities of the system potential metrics and some of the data needs that are required to assess the effects The overview of the food system and the framework described in this report will be an essential resource for decision makers researchers and others to examine the possible impacts of alternative policies or agricultural or food processing practices
