The topics in this book cover a broad range of research interests from business engineering and its application in corporate and business networking contexts to design science research as well as applied topics where those research methods have been employed for modeling data warehousing information systems management enterprise architecture management management of large and complex projects and enterprise transformation The book is a Festschrift for Robert Winter in order to appreciate his work and to honor him as a personality with a high reputation in the information systems community To this end many professional colleagues or long time companions both from the Institute of Information Management at the University of St Gallen as well as from the international research community dedicated articles on topics related to Robert's research They reflect his ambition to uncompromisingly conduct high class research that fuels the research community and at the same time contributes to improved industrial practice The book is organized in three major parts Part I Business Engineering and Beyond focuses on the methodology strongly shaped by Robert in St Gallen with a focus on research being applied in corporate contexts Part II Design Science Research spans from reflections on the practice of design science research to perspectives on design science research methodologies and eventually up to considerations to teach design science research methodology Part III Applied Fields combines various applications of design science and related research methodologies with practical problems and future research topics **The Elephant in the Fridge: Guided Steps to Data Vault Success through Building Business-Centered Models** John Giles, You want the rigor of good data architecture at the speed of agile Then this is the missing link your step by step guide to Data Vault success Success with a Data Vault starts with the business and ends with the business Sure there's some technical stuff in the middle and it is absolutely essential but it's not sufficient on its own This book will help you shape the business perspective and weave it into the more technical aspects of Data Vault modeling You can read the foundational books and go on courses but one massive risk still remains Dan Lindstedt the founder of the Data Vault very clearly directs those building a Data Vault to base its design on an enterprise ontology And Hans Hultgren similarly stresses the importance of the business concepts model So it's important We get that But What on earth is an enterprise ontology business concept model cause I won't know if I've got one if I don't know what I'm looking for If I can't find one how do I get my hands on such a thing Even if I have one of these wonderful things how do I apply it to get the sort of Data Vault that's recommended It's actually not as hard as some would fear to answer all of these questions and it's certainly worth the effort This book just might save you a world of pain It's a supplement to other material on Data Vault modeling but it's the vital missing link to finding simplicity for Data Vault success Data Warehousing in the context of large healthcare organizations is notoriously difficult largely in part due to challenges around Health Information Modeling The Elephant in the Fridge provides clear and rational perspectives that have allowed my team to breakthrough

some of our circular debates and too hard basket challenges Success in this space will require technical and health professionals to co design solutions around a shared information model This book is written in a way that they can both consume John s experience and emphasis on art of Information Modelling is a welcome complement to other works on Data Vault I wish we had this book a year ago Benson Choy Enterprise Information Architect eHealth Queensland John has a wonderful way of explaining complicated topics in an uncomplicated way If you ve heard about taxonomies and are wondering how to apply these to your Data Warehouse then this is the book for you Data modelling is about the business and John explains how this can be achieved by using proven business templates which help to quickly and efficiently define a solid data model Don t re invent the wheel but start with the model patterns that are already available This is a highly relevant book because it helps to match the information delivery to business expectations by correctly applying taxonomies and business model archetypes in a clear and simple way Roelant Vos General Manager Enterprise Data Management It has been a delight and privilege working with John on a Data Vault project I have enjoyed his practical and pragmatic approach and readiness to share his wealth of knowledge This is an excellent book written based on real life experience It provides valuable and timely insights into Data Vault modeling and delivery and can be easily understood by those who are new to the Data Vault The book contains practical advice and sample patterns to help people get started on a Data Vault project and avoid costly mistakes Natalia Bulashenko Information Solution Architect This book covers off one of the key aspects of Data Vault the Modelling Far too many DV practitioners come from a technical database background and lack the fundamental Data Modelling skills necessary to identify the Key Business Concepts that are core to successful DV projects Far too many of us start with the low hanging fruit that we have available to us the source systems John explains why this is an extremely bad approach with examples identifying the signs that the project is heading into trouble and then describes what needs to be done to get back on track This book is NOT about the implementation phase it s about setting the corner stone for the whole project Get this right and you are on the road to a successful project Peter Dudley Consultant Interactive Innovations
