Modelling Long-term Scenarios for Low Carbon Societies Neil Strachan, Tim Foxon, Junichi Fujino, 2015-02-13 With the ever increasing impacts of climate change it is now clear that global society will have to restructure its energy systems in order to decrease carbon emissions The scenarios under which this transition to low carbon societies LCS could occur would have complex economic technological behavioural and policy implications This volume a supplement to the Climate Policy journal considers these implications by examining different low carbon scenarios for different countries modelled at different scales and typologies Two overview chapters co written by international experts set the context of scenario development and quantification of LCS and summarize the findings on the economic implications societal responses technological developments and required policy measures to enable LCS across a range of countries Further chapters detail the modelling of various scenarios and outline the model methodology detail the economic and technological consequences of transitions to LCS and comment on the strengths and weaknesses of specific policies [Modelling Long-term Scenarios for Low Carbon Societies](#) Neil Strachan, Tim Foxon, Junichi Fujino, 2008 First Published in 2008 Routledge is an imprint of Taylor Francis an informa company *Living in a Low-Carbon Society in 2050* H. Herring, 2012-08-29 Combining theory case studies and speculative fiction a range of contributors from leading UK academics to pioneering renewable activists create a compelling picture of the potential perks and pitfalls of a low carbon future [Low Carbon Transitions for Developing Countries](#) Frauke Urban, 2014-06-13 Global climate change is one of the greatest challenges of our times and in order to tackle this carbon emissions need to be mitigated China and India have recently become some of the world s largest greenhouse gas emitters Transitions to low carbon energy for reducing emissions that lead to climate change are therefore an urgent priority for China and India and at a global level This is the first book focusing on low carbon energy transitions for emerging economies such as China and India assessing the opportunities and barriers for transitions to renewable and low carbon energy as climate change mitigation options It uses energy modelling to assess the China s power sector the economy of Beijing and rural Indian households that do not have access to electricity The research evaluates the environmental technical socio economic and policy implications of these low carbon transitions concluding that they are possible in China and India and they can considerably contribute to climate change mitigation This interdisciplinary book will be of interest to scholars students practitioners and policy makers working in the fields of energy and development energy policy energy studies and modelling climate policy climate change mitigation climate change and development low carbon development sustainable development environment and development and environmental management **Low Carbon Development** Frauke Urban, Johan Nordensvard, 2013-07-18 Low Carbon Development Key Issues is the first comprehensive textbook to address the interface between international development and climate change in a carbon constrained world It discusses the key conceptual empirical and policy related issues of low carbon development and takes an international and interdisciplinary

approach to the subject by drawing on insights from across the natural sciences and social sciences whilst embedding the discussion in a global context The first part explores the concept of low carbon development and explains the need for low carbon development in a carbon constrained world The book then discusses the key issues of socio economic political and technological nature for low carbon development exploring topics such as the political economy social justice financing and carbon markets and technologies and innovation for low carbon development This is followed by key issues for low carbon development in policy and practice which is presented based on cross cutting issues such as low carbon energy forestry agriculture and transportation Afterwards practical case studies are discussed from low carbon development in low income countries in Africa middle income countries in Asia and Latin America and high income countries in Europe and North America Written by an international team of leading academics and practitioners in the field of low carbon development this book is essential reading for students academics professionals and policy makers interested in the fields of low carbon development climate change mitigation climate policy climate change and development global environmental change and environment and development **Advanced Models of Energy Forecasting** Xun Zhang,Bo Meng,Lean Yu,2022-11-23

Low-carbon, Sustainable Future in East Asia Soo-Cheol Lee,Hector Pollitt,Seung-Joon Park,2015-08-27 East Asia is a key region in the global economy including both the second and third largest global economies already and led by China continuing to expand at a rapid rate This economic growth has led to unprecedented gains in prosperity in the region but it has also led to increasing environmental pressures and energy issues This book assesses ways in which East Asia can continue or even increase existing rates of economic growth while at the same time reducing greenhouse gas emissions and other environmental degradation Using advanced modelling approaches future scenarios for four East Asian countries are assessed in detail including analysis of particular challenges in each country e g coal power in China nuclear power in Japan Prospects for each country s energy system are assessed in detail and the potential effects of various types of Environmental Tax Reform in the four countries are also considered carefully The final section of the book explores the interaction between trade liberalization a key driver of growth and emission levels in the East Asia region **Decarbonising The World's Economy: Assessing The Feasibility Of Policies To Reduce Greenhouse Gas Emissions** Terry Barker,Douglas Crawford-brown,2014-11-05 Too often amongst policy makers and thought leaders an assumption is made that we must make a choice between tackling climate change and having a strong economy tackling climate change and allowing poorer nations to develop tackling climate change and having a secure energy system However a decade of advanced modelling tested against historical data has provided wide evidence that well chosen policies can be implemented that avoid these apparent either or choices This highly interdisciplinary book provides an overview of potential pathways for the decarbonisation of the global economy By examining the entire global economy we show policy makers and thought leaders that greatly reducing the risks of climate change can be consistent with energy security economic development in poor nations and vibrant

economies in already developed nations Advanced models of the relationships between the economy energy and climate change pioneered at the Cambridge Centre for Climate Change Mitigation Research 4CMR over the past decade provides a sound evidence base for decisions This book examines not only the impacts of policies but also the feasibility of bringing them forward and the ways in which energy climate and economic policies can and must be joined up if climate energy and economic goals are to be met globally Economists physicists engineers policy analysts environmental scientists climate scientists political analysts lawyers and computational scientists are brought together for the first time to produce analyses that make up a unique approach to a global problem that must be addressed sooner rather than later *Energy,*

Environmental and Economic Sustainability in East Asia Soo-Cheol Lee,Hector Pollitt,Kiyoshi Fujikawa,2019-08-06 This book looks at institutional reforms for the use of energy water and resources toward a sustainable future in East Asia The book argues that developments in the East Asian region are critical to global sustainability and acknowledges that there is an increasing degree of mutual reliance among countries in East Asia primarily China Japan Korea and Taiwan It analyzes environmental impacts stemming from the use of energy water and mineral resources via economic development in East Asia in the medium to long term through 2050 through theoretical and empirical modelling The book also evaluates the ripple effects of environmental and resource policies on each country s economy and clarifies the direction of institutional reform in energy systems resources and water use for a sustainable future *Post-2020 Climate Action* Shinichiro Fujimori,Mikiko Kainuma,Toshihiko Masui,2017-09-16 This book summarizes assessments of the Paris Agreement to provide an excellent introduction to this research field The AIM CGE Asia Pacific Integrated Modeling Computable General Equilibrium model which is the core of AIM modeling framework is used for the assessment The first part focuses on global issues presenting both short term a few decades and long term century scale assessments in the context of the Agreement s ultimate climate goal It also discusses policy implementation and climate risk Part 2 is a collection of assessments of individual Asian countries providing insights into the national situations and detailed analyses It includes contributions from Asian countries as well as NIES National Institute for Environmental Studies Japan members The main conclusion is that many countries require changes to their energy systems change and societal transformation in order to meet emissions targets Part 3 describes in detail the AIM CGE model which is used to evaluate the climate and energy policies by simulating the future economic and energy and environmental situation in the Asia Pacific region This section can be used as a standard text on CGE modelling in climate change mitigation
