

MOTOR POSITION SENSOR (MPS)

NT4880GA

The MPS, a variable resistor type sensor, is installed in the ISC servo. Its sliding pin is in contact with the plunger end and as the plunger moves, the internal resistance of the MPS changes (namely, the output voltage changes).

The MPS senses the ISC servo plunger position and sends the signal to the ECU.

The ECU controls the valve opening, and consequently the idle speed by using the MPS signal, idle signal, engine coolant temperature signal, load signals (automatic transmission and air conditioner) and vehicle speed signal.

ENGINE SPEED SENSOR (IGNITION COIL NEGATIVE TERMINAL VOLTAGE SENSOR)

NT4880HB

The ignition coil negative terminal voltage makes sudden increase twice per engine revolution synchronously with ignition timing.

By sensing this ignition coil negative terminal voltage change and measuring the time between peak voltages, the ECU computes the engine speed, judges the engine operating mode and controls the air-fuel ratio and idle speed.
