**Model Driven Engineering and Ontology Development** Dragan Gašević, Dragan Djuric, Vladan Devedžić, 2009-06-12

Defining a formal domain ontology is generally considered a useful not to say necessary step in almost every software project. This is because software deals with ideas rather than with self-evident physical artefacts. However, this development step is hardly ever done as ontologies rely on well-defined and semantically powerful AI concepts such as description logics or rule-based systems and most software engineers are largely unfamiliar with these. Gašević and his co-authors try to fill this gap by detailing how to use model-driven engineering for ontology development on the Semantic Web. Part I of their book describes existing technologies, tools and standards like XML, RDF, OWL, MDA and UML. Part II presents the first detailed description of OMG's new ODM (Ontology Definition Metamodel) initiative, a specification which is expected to be in the form of an OMG language like UML. Finally, Part III is dedicated to applications and practical aspects of developing ontologies using MDA-based languages. For this second edition, the descriptions of the related standards like MOF, ODM, OCL and OWL have been revised and updated, new chapters introducing the basic principles of model-driven engineering, recent research results on metamodeling, Semantic Web rule languages, an introduction to the Atlas Transformation Language (ATL) and its tool support, and last but not least many new examples have been added.

Defining a formal domain ontology is considered a useful not to say necessary step in almost every software project. This is because software deals with ideas rather than with self-evident physical artefacts. However, this development step is hardly ever done as ontologies rely on well-defined and semantically powerful AI concepts such as description logics or rule-based systems and most software engineers are unfamiliar with these. This book fills this gap by covering the subject of MDA application for ontology development on the Semantic Web. The writing is technical yet clear and is illustrated with examples. The book is supported by a website.

*Semantic Web and Model-Driven Engineering* Fernando S. Parreiras, 2012-06-05

The next enterprise computing era will rely on the synergy between both technologies: semantic web and model-driven software development (MDSD). The semantic web organizes system knowledge in conceptual domains according to its meaning. It addresses various enterprise computing needs by identifying, abstracting and rationalizing commonalities and checking for inconsistencies across system specifications. On the other side, model-driven software development is closing the gap among business requirements, designs and executables by using domain-specific languages with custom-built syntax and semantics. It focuses on using modeling languages as programming languages. Among many areas of application, we highlight the area of configuration management. Consider the example of a telecommunication company where managing the multiple configurations of network devices (routers, hubs, modems, etc.) is crucial. Enterprise systems identify and document the functional and physical characteristics of network devices and control changes to those characteristics. Applying the integration of semantic web and model-driven software development allows for

1 explicitly specifying configurations of network devices with tailor made languages 2 for checking the consistency of these specifications 3 for defining a vocabulary to share device specifications across enterprise systems By managing configurations with consistent and explicit concepts we reduce cost and risk and enhance agility in response to new requirements in the telecommunication area This book examines the synergy between semantic web and model driven software development It brings together advances from disciplines like ontologies description logics domain specific modeling model transformation and ontology engineering to take enterprise computing to the next level
