

Chemistry – Unit 6 Notes 1 - Thomson Model of the Atom

J. J. Thomson performed experiments with cathode rays in an attempt to understand electricity – which was still a mystery in the late 1800s. Use the website *A Look Inside the Atom*¹ to find the conclusions that Thomson and other physicists drew regarding the mysterious cathode rays.

Thomson's 1897 Experiments - state the conclusions Thomson drew from each of his famous cathode ray experiments:

1. **First Experiment:** Thomson directed the beam at an electrometer and tried to separate the evidence of charge from the path of the beam. *What connection did Thomson find between charge and the cathode rays? Was the charge positive or negative?*
2. **Second Experiment:** Thomson tried passing the cathode ray through an electric field. *How did cathode ray beam behave when it passed through an electric field? What did he conclude after his second experiment?*
3. **Third Experiment:** Thomson did some careful measurements on how much the path of the cathode ray was bent in a magnetic field and how much energy they carried. From this work Thomson could describe the mass/charge ratio of the cathode ray particles. *What amazing result did Thomson find?*

Thomson's Atomic Model: Thomson presented three hypotheses from his experiments. Only two were accepted by physicists – in fact the third was shown to be wrong! From the first two came a model of the atom known as the *Plum Pudding* model. Complete the atom drawing below to illustrate Thomson's plum pudding model. Explain how this fits with his observations.

Live Load Test and Failure Analysis for the Steel Deck Truss Bridge Over the New River in Virginia ,2009 This report presents the methods used to model a steel deck truss bridge over the New River in Hillsville Virginia These methods were evaluated by comparing analytical results with data recorded from 14 members during live load testing The research presented herein is part of a larger endeavor to understand the structural behavior and collapse mechanism of the erstwhile I 35W bridge in Minneapolis Minnesota that collapsed on August 1 2007 Objectives accomplished toward this end include investigation of lacing effects on built up member strain measurement live load testing of a steel truss bridge and evaluation of modeling techniques in comparison to recorded data The most accurate model was used to conduct a failure analysis with the intent of then loading the steel truss bridge to failure Before any live load testing could be performed it was necessary to confirm an acceptable strain gage layout for measuring member strains The effect of riveted lacing in built up members was investigated by constructing a two thirds mockup of a typical bridge member The mockup was instrumented with strain gages and subjected to known loads to determine the most effective strain gage arrangement The results of the testing analysis showed that for a built up member consisting of laced channels one strain gage installed on the middle of the extreme fiber of each channel s flanges was sufficient Thus laced members on the bridge were mounted with four strain gages each Data from live loads were obtained by loading two trucks to 25 tons each Trucks were positioned at eight locations on the bridge in four different relative truck positions Data were recorded continuously and reduced to member forces for model validation comparisons Deflections at selected truss nodes were also recorded for model validation purposes The model validation process began by developing four simple truss models each reflecting different expected restraint conditions in the hopes of bracketing data from recorded results The models included a simple truss model a frame model with only the truss members and a frame model that included the stringers The final most accurate model was selected and used for a failure analysis This model showed where the minimum amount of load could be applied to learn about the bridge s failure behavior and was to be used for a test to be conducted at a later time Unfortunately the project was terminated because of a lack of funding before the actual test to failure of the steel truss bridge was conducted Nevertheless findings from the study led to two important recommendations 1 When instrumenting a steel truss bridge for load testing by placing strain gages on built up members four gages one placed on each flange of each channel should be used 2 When modeling deck truss bridges the system should be considered to be a frame and should include the stringers in the model

2022 2nd International Conference on Management Science and Software Engineering (ICMSSE 2022) Syed Abdul Rehman Khan,Noor Zaman Jhanjhi,Hongbo Li,2024-03-09 This is an open access book Management science and engineering is a systematic discipline that combines modern information technology and digital technology and then uses some related discipline methods such as systems science mathematical science economics and behavioral science and engineering methods After

analyzing and researching some problems arising from social economy engineering education finance etc and making corresponding countermeasures The main purpose is to achieve control and planning decision making and adjustment in social economic education engineering and other aspects and then make improvements and finally organize and coordinate The relevant departments can be combined to achieve system management so that the allocation of resources and the Management can be rationally optimized so that individual functions can play the greatest role minimize resource consumption and maximize the optimal allocation of resources This is also the ultimate research purpose Liangliang Wang said Management is the productive force which promotes the development of the country society and enterprise The relationship between management practice and management science is the relationship between theory and practice The research on management science helps to improve the level of management and then promote the development of the country society and enterprises On the other hand management practice changes with the continuous progress of the times It is necessary to study the current situation and trend of management science in the new era which will help to clarify the future development direction of the discipline and discover the deficiencies in management scientific research and grasp it The focus of management science research thereby promoting research in management science Therefore it is necessary to create a space for management science practitioners engineering practitioners researchers and related enthusiasts to gather and discuss this current issue The 2nd International Conference on Management Science and Software Engineering ICMSSE 2022 aims to accommodate this need as well as to 1 provide a platform for experts and scholars engineers and technicians in the field of management and software engineering to share scientific research achievements and cutting edge technologies 2 understand academic development trends broaden research ideas strengthen academic research and discussion and promote the industrialization cooperation of academic achievements 3 Promote the institutionalization and standardization of management science through modern research The conference will focus on software processing and information systems combining research directions in the field of management ICMSSE International Conference on Management Science and Software Engineering welcomes papers dealing with management systems research software programming management systems optimization information systems management etc The 2nd International Conference on Management Science and Software Engineering ICMSSE 2022 will be held in Chongqing on July 15 17 2022 The conference sincerely invites experts scholars business people and other relevant personnel from domestic and foreign universities research institutions to participate in the exchange **Radioactive Waste Management** ,1981 **Energy Research Abstracts** ,1986
