Urban Living Labs Simon Marvin, Harriet Bulkeley, Lindsay Mai, Kes McCormick, Yuliya Voytenko Palgan, 2018-05-03 All cities face a pressing challenge how can they provide economic prosperity and social cohesion while achieving environmental sustainability In response new collaborations are emerging in the form of urban living labs sites devised to design test and learn from social and technical innovation in real time The aim of this volume is to examine inform and advance the governance of sustainability transitions through urban living labs Notably urban living labs are proliferating rapidly across the globe as a means through which public and private actors are testing innovations in buildings transport and energy systems Yet despite the experimentation taking place on the ground we lack systematic learning and international comparison across urban and national contexts about their impacts and effectiveness We have limited

knowledge on how good practice can be scaled up to achieve the transformative change required This book brings together leading international researchers within a systematic comparative framework for evaluating the design practices and processes of urban living labs to enable the comparative analysis of their potential and limits It provides new insights into the governance of urban sustainability and how to improve the design and implementation of urban living labs in order to realise their potential

exemplify the diverse and dynamic nature and importance of suburbia in 21st century urban studies city building and urbanism This book explores the evolving social physical and economic character of the suburbs and how structural processes market dynamics and government policies have shaped and transformed suburbia around the world It highlights the continuing importance of the suburbs and the suburban dream which lives on albeit under increasing challenges such as the global financial crisis structural racism and the Covid 19 pandemic which have given rise to various suburban nightmares

Rethinking Urban Transitions Andrés Luque-Ayala, Simon Marvin, Harriet Bulkeley, 2018-03-15 Rethinking Urban Transitions provides critical insight for societal and policy debates about the potential and limits of low carbon urbanism It draws on over a decade of international research undertaken by scholars across multiple disciplines concerned with analysing and shaping urban sustainability transitions It seeks to open up the possibility of a new generation of urban low carbon transition research which foregrounds the importance of political geographical and developmental context in shaping the possibilities for a low carbon urban future The book's contributions propose an interpretation of urban low carbon transitions as primarily social political and developmental processes Rather than being primarily technical efforts aimed at measuring and mitigating greenhouse gases the low carbon transition requires a shift in the mode and politics of urban development The book argues that moving towards this model requires rethinking what it means to design practise and mobilize low carbon in the city while also acknowledging the presence of multiple and contested developmental pathways Key to this shift is thinking about transitions not solely as technical infrastructural or systemic shifts but also as a way of thinking about collective futures societal development and governing modes a recognition of the political and contested nature of low carbon urbanism The various contributions provide novel conceptual frameworks as well as empirically rich cases through which we can begin to interrogate the relevance of socio economic political and developmental dimensions in the making or unmaking of low carbon in the city The book draws on a diverse range of examples including world cities and ordinary cities from North America South America Europe Australia Africa India and China to provide evidence that expectations aspirations and plans to undertake purposive socio technical transitions are both emerging and encountering resistance in different urban contexts Rethinking Urban Transitions is an essential text for courses concerned with cities climate change and environmental issues in sociology politics urban studies planning environmental studies geography and the built environment

Energy, Power and Protest on the Urban Grid Andres

Luque-Ayala, Jonathan Silver, 2016-04-28 Providing a global overview of experiments around the transformation of cities electricity networks and the social struggles associated with this change this book explores the centrality of electricity infrastructures in the urban configuration of social control segregation integration resource access and poverty alleviation Through multiple accounts from a range of global cities this edited collection establishes an agenda that recognises the uneven and often historical geographies of urban electricity networks prompting attempts to re wire the infrastructure configurations of cities and predicating protest and resistance from residents and social movements alike Through a robust theoretical engagement with established work around the politics of urban infrastructures the book frames the transformation of electricity systems in the context of power and resistance across urban life drawing links between environmental and social forms of sustainability Such an agenda can provide both insight and inspiration in seeking to build fairer and more sustainable urban futures that bring electricity infrastructures to the fore of academic and policy attention
