RF Positioning: Fundamentals, Applications, and Tools Rafael Saraiva Campos, Lisandro Lovisolo, 2015-07-01 This new resource presents a comprehensive view of radio frequency RF positioning. The book is organized to allow readers to progress at a fast pace from the fundamentals of RF positioning to the use of advanced tools such as artificial intelligence algorithms and application development environments. The first part of the book covers the fundamentals of RF localization. The second part addresses the application of those fundamentals in several types of wireless networks and technologies as Cellular Networks, Wi-Fi, Bluetooth, Sensor Networks, Ultra Wide Band, and Global Navigation Satellite Systems. The third part brings several tools to allow rapid development of positioning applications for mobile devices as well as to support implementation, usage, deployment, and research of localization algorithms. This book presents numerous MATLAB examples accompanied by the corresponding MATLAB code made available at the book website. The MATLAB code to most figures is also provided as well as databases of measurements collected during experiments conducted both in cellular and Wi-Fi networks. The book also is accompanied by Android source codes of the example apps developed in Chapter 10.

RF Positioning Rafael Saraiva Campos, 2015 **Wireless Positioning Technologies and Applications, Second Edition** Alan Bensky, 2016-03-01 This updated second edition of the Artech House book *Wireless Positioning Technologies and Applications* presents comprehensive coverage of wireless positioning principles and technologies for engineers involved in using or developing wireless location applications. This book explains the basics of GPS and demonstrates the applications of fundamental distance measuring principles. This edition includes updated and expanded chapters on satellite navigation, OFDM, Orthogonal Frequency Division Multiplex, TDOA, location facilities in 3GPP LTE specifications, carrier phase measurements, and DGPS, wireless sensor networks, MIMO, positions, inertial navigation, and data fusion. Moreover, complete coverage of cellular network infrastructure for location, including 4G LTE and up to date Bluetooth location in short range wireless networks, is presented as well as modernization programs used for GPS accuracy and reliability. This book helps readers assess available positioning methods for new applications, locate applicable sources for a given technology, and simply difficult engineering and mathematical concepts.

All Source Positioning, Navigation and Timing Rongsheng (Ken) Li, 2020-10-31 This is the first book on the topic of all source positioning, navigation, and timing (PNT) and how to solve the problem of PNT when the most widely used measurement source available today, the GPS system, may become unavailable, jammed, or spoofed. Readers learn how to define the system architecture as well as the algorithms for GPS-denied and GPS-challenged PNT systems. In addition, the book provides comprehensive coverage of the individual technologies used, such as celestial navigation, vision-based navigation, terrain-referenced navigation, gravity anomaly-referenced navigation, signal of opportunity (SOO)-based PNT, and collaborative PNT. Celestial navigation is discussed with stars and satellite used as reference, and star tracker technology also included. Propagation-based timing solutions are explored, and the basic principles

of oscillators and clocks presented Initial alignment of strap down navigation systems is explored including initial alignment as a Kalman filter problem Velocimeter Dead reckoning based navigation and its impact on visual odometry is also explained Covering both theoretical and practical issues and packed with equations and models this book is useful for both the engineering student as well as the advanced practitioner
