Modelling Scale In Geographical Information Science:

Modelling Scale in Geographical Information Science Nicholas Tate, Peter M. Atkinson, 2001-12-05 Scale has long been a fundamental concept in geography. Its importance is emphasised in geographical information science GIScience where the computational domain necessitates the rigorous definition and handling of scale. Geographical information systems are now used in almost every walk of life but scale is often handled poorly in such systems. *Modelling Scale in Geographical Information Science* is written by an international team of contributors drawn from both industry and academia and considers models and methods of scaling spatial data in both human and physical systems. Divided into three sections to give a balanced coverage of the key problems, tools and models associated with scale: Fractal Models, The Modifiable Areal Unit Problem, Changing the Scale of Measurement. This book is an essential read for all GIScience researchers, advanced students and practitioners who want to delve more deeply into the scale issues of the spatial data and spatial models that form the basis of their analyses.

Confronting Scale in Archaeology Gary Lock, Brian Molyneux, 2007-11-15 Without realizing most archaeologists shift within a scale of interpretation of material culture. Material data is interpreted from the scale of an individual in a specific place and time then shifted to the complex dynamics of cultural groups spread over time and place. This book discusses the cultural, social and spatial aspects of scale and its impact on archaeology and shows how an improved awareness of scale offers new and exciting interpretations.

Geographical Information Science George P. Petropoulos, Christos Chalkias, 2024-05-24 *Geographic Information Systems Case Studies in Environmental Monitoring* provides detailed remote sensing and GIS methods, algorithms and technology comparisons focusing on a wide range of environmental applications. The geoinformation technologies are demonstrated through templated case studies detailing real world use of the techniques and clarifying methods, tools and practical solutions to environmental mapping and monitoring. The book utilizes remote sensing and geospatial data from the most recently launched satellites and applies the latest geospatial data approaches and analysis software tools, both commercial and open source. *Geographic Information Systems Case Studies in Environmental Monitoring* is a comprehensive reference for researchers, academics and technicians in the fields of geospatial science or those processing and analyzing geospatial data for monitoring and modelling. Focuses on global templated case studies of GIS applications to environmental monitoring. Includes methodologies allowing readers to recreate techniques and models and workflows that can be used in their own work. Covers a plethora of topics in applied geosciences providing environmental and geographical applications of practical interest.

Encyclopedia of Geographic Information Science Karen Kemp, 2008 Geographic information science GIScience is an emerging field that combines aspects of many different disciplines. Spatial literacy is rapidly becoming recognized as a new essential pillar of basic education alongside grammatical, logical and mathematical literacy. By incorporating location as an essential but often overlooked characteristic of what we seek to understand in the natural and built environment, geographic information science GIScience and systems

GISystems provide the conceptual foundation and tools to explore this new frontier The Encyclopedia of Geographic Information Science covers the essence of this exciting new and expanding field in an easily understood but richly detailed style In addition to contributions from some of the best recognized scholars in GIScience this volume contains contributions from experts in GIS supporting disciplines who explore how their disciplinary perspectives are expanded within the context of GIScience what changes when consideration of location is added what complexities in analytical procedures are added when we consider objects in 2 3 or even 4 dimensions what can we gain by visualizing our analytical results on a map or 3D display Key Features Brings together GIScience literature that is spread widely across the academic spectrum Offers details about the key foundations of GIScience no matter what their disciplinary origins Elucidates vocabulary that is an amalgam of all of these fields Key Themes Conceptual Foundations Cartography and Visualization Design Aspects Data Manipulation Data Modeling Geocomputation Geospatial Data Societal Issues Spatial Analysis Organizational and Institutional Aspects The Encyclopedia of Geographic Information Science is an important resource for academic and corporate libraries

Geographic Information Science Max J. Egenhofer, Christian Freksa, Harvey J. Miller, 2004-10-15 This book constitutes the refereed proceedings of the Third International Conference on Geographic Information Science GIScience 2004 held in Adelphi MD USA in October 2004 The 25 revised full papers presented were carefully reviewed and selected from many submissions Among the topics addressed are knowledge mapping geo self organizing maps space syntax geospatial data integration geospatial modeling spatial search spatial indexing spatial data analysis mobile ad hoc geosensor networks map comparison spatiotemporal relations ontologies and geospatial event modeling **Exploring Spatial Scale in Geography**

Christopher D. Lloyd, 2014-03-04 Exploring Spatial Scale in Geography provides a conceptual and practical guide to issues of spatial scale in all areas of the physical and social sciences Scale is at the heart of geography and other spatial sciences Whether dealing with geomorphological processes population movements or meteorology a consideration of spatial scale is vital Exploring Spatial Scale in Geography takes a practical approach with a core focus on real world problems and potential solutions Links are made to appropriate software environments with an associated website providing access to guidance material which outlines how particular problems can be approached using popular GIS and spatial data analysis software This book offers alternative definitions of spatial scale presents approaches for exploring spatial scale and makes use of a wide variety of case studies in the physical and social sciences to demonstrate key concepts making it a key resource for anyone who makes use of geographical information Fuzzy Modeling with Spatial Information for Geographic Problems

Frederick E. Petry, Vincent B. Robinson, Maria A. Cobb, 2006-01-16 The capabilities of modern technology are rapidly increasing spurred on to a large extent by the tremendous advances in communications and computing Automated vehicles and global wireless connections are some examples of these advances In order to take advantage of such enhanced capabilities our need to model and manipulate our knowledge of the geophysical world using compatible representations is

also rapidly increasing In response to this one fundamental issue of great concern in modern geographical research is how to most effectively capture the physical world around us in systems like geographical information systems GIS Making this task even more challenging is the fact that uncertainty plays a pervasive role in the representation analysis and use of geospatial information The types of uncertainty that appear in geospatial information systems are not the just simple randomness of observation as in weather data but are manifested in many other forms including imprecision incompleteness and granularization Describing the uncertainty of the boundaries of deserts and mountains clearly require different tools than those provided by probability theory The multiplicity of modalities of uncertainty appearing in GIS requires a variety of formalisms to model these uncertainties In light of this it is natural that fuzzy set theory has become a topic of intensive interest in many areas of geographical research and applications This volume Fuzzy Modeling with Spatial Information for Geographic Problems provides many stimulating examples of advances in geographical research based on approaches using fuzzy sets and related technologies

Integrating Scale in Remote Sensing and GIS Dale A. Quattrochi, Elizabeth Wentz, Nina Siu-Ngan Lam, Charles W. Emerson, 2017-01-06 Integrating Scale in Remote Sensing and GIS serves as the most comprehensive documentation of the scientific and methodological advances that have taken place in integrating scale and remote sensing data This work addresses the invariants of scale the ability to change scale measures of the impact of scale scale as a parameter in process models and the implementation of multiscale approaches as methods and techniques for integrating multiple kinds of remote sensing data collected at varying spatial temporal and radiometric scales Researchers instructors and students alike will benefit from a guide that has been pragmatically divided into four thematic groups scale issues and multiple scaling physical scale as applied to natural resources urban scale and human health social scale Teeming with insights that elucidate the significance of scale as a foundation for geographic analysis this book is a vital resource to those seriously involved in the field of GIScience

A Research Agenda for Geographic Information Science Robert B. McMaster, E. Lynn Usery, 2004-08-30 A close relationship exists between GIS and numerous applications including cartography photogrammetry geodesy surveying computer and information science and statistics among others Scientists coined the term geographic information science GIScience to describe the theory behind these fields A Research Agenda for Geographic Information

Geographic Information Science Sara Irina Fabrikant, Tumasch Reichenbacher, Marc van Kreveld, Christoph Schlieder, 2010-09-03 This book constitutes the refereed proceedings of the 6th International Conference on Geographic Information Science GIScience 2010 held in Zurich Switzerland in September 2010 The 22 revised full papers presented were carefully reviewed and selected from 87 submissions While traditional research topics such as spatio temporal representations spatial relations interoperability geographic databases cartographic generalization geographic visualization navigation spatial cognition are alive and well in GIScience research on how to handle massive and rapidly growing databases of dynamic space time phenomena at fine grained resolution for example generated through sensor

networks has clearly emerged as a new and popular research frontier in the field
