Engineering Combustion Essentials David S-K. Ting, 2018-09-30 Whether in the Stone Age or in Greek mythology fire has always been the essence of life As G G Brown put it in 1928 Combustion is without exaggeration the most important reaction to the human race All human and animal existence depends upon combustion as its course of energy This book provides a detailed

description of the elements of combustion offering descriptive figures illustrative quips and analogies to facilitate understanding It begins with some historical highlights of the understanding of combustion and technological progresses It then discusses the thermodynamic and chemical kinetics underlying the fast chemical reactions before expounding on the fundamental combustion wave or flame After this the book moves onto the premixed turbulent flame and the spark ignited turbulent flame before considering the diffusion controlled non premixed flame in both laminar and turbulent forms The book concludes with explanations of wonderful natural combustion fire fire retarding slime and DNA and the amazing bombardier beetle

The Routledge Handbook of the Political Economy of Science David Tyfield,Rebecca Lave,Samuel Randalls,Charles Thorpe,2017-04-28 The political economy of research and innovation R I is one of the central issues of the early twenty first century Science and innovation are increasingly tasked with driving and reshaping a troubled global economy while also tackling multiple overlapping global challenges such as climate change or food security global pandemics or energy security But responding to these demands is made more complicated because R I themselves are changing Today new global patterns of R I are transforming the very structures institutions and processes of science and innovation and with it their claims about desirable futures Our understanding of R I needs to change accordingly Responding to this new urgency and uncertainty this handbook presents a pioneering selection of the growing body of literature that has emerged in recent years at the intersection of science and technology studies and political economy The central task for this research has been to expose important but consequential misconceptions about the political economy of R I and to build more insightful approaches This volume therefore explores the complex interrelations between R I both in general and in specific fields and political economies across a number of key dimensions from health to environment and universities to the military The Routledge Handbook of the Political Economy of Science offers a unique collection of texts across a range of issues in this burgeoning and important field from a global selection of top scholars The handbook is essential reading for students interested in the political economy of science technology and innovation It also presents succinct and insightful summaries of the state of the art for more advanced scholars

An Engine, Not a Camera Donald MacKenzie,2008-08-29 In An Engine Not a Camera Donald MacKenzie argues that the emergence of modern economic theories of finance affected financial markets in fundamental ways These new Nobel Prize winning theories based on elegant mathematical models of markets were not simply external analyses but intrinsic parts of economic processes Paraphrasing Milton Friedman MacKenzie says that economic models are an engine of inquiry rather than a camera to reproduce empirical facts More than that the emergence of an authoritative theory of financial markets altered those markets fundamentally For example in 1970 there

was almost no trading in financial derivatives such as futures By June of 2004 derivatives contracts totaling 273 trillion were outstanding worldwide MacKenzie suggests that this growth could never have happened without the development of theories that gave derivatives legitimacy and explained their complexities MacKenzie examines the role played by finance theory in the two most serious crises to hit the world's financial markets in recent years the stock market crash of 1987 and the market turmoil that engulfed the hedge fund Long Term Capital Management in 1998 He also looks at finance theory that is somewhat beyond the mainstream chaos theorist Benoit Mandelbrot's model of wild randomness MacKenzie's pioneering work in the social studies of finance will interest anyone who wants to understand how America's financial markets have grown into their current form

The Computing Universe Tony Hey, Gyuri Pápay, 2014-12-08 Computers now impact almost every aspect of our lives from our social interactions to the safety and performance of our cars How did this happen in such a short time And this is just the beginning In this book Tony Hey and Gyuri Pápay lead us on a journey from the early days of computers in the 1930s to the cutting edge research of the present day that will shape computing in the coming decades Along the way they explain the ideas behind hardware software algorithms Moore's Law the birth of the personal computer the Internet and the Web the Turing Test Jeopardy's Watson World of Warcraft spyware Google Facebook and quantum computing This book also introduces the fascinating cast of dreamers and inventors who brought these great technological developments into every corner of the modern world This exciting and accessible introduction will open up the universe of computing to anyone who has ever wondered where his or her smartphone came from
