Toward a Process Approach in Psychology Paul van Geert, Naomi de Ruiter, 2022-07-28 Psychological science constructs much of the knowledge that we consume in our everyday lives This book is a systematic analysis of this process and of the nature of the knowledge it produces The authors show how mainstream scientific activity treats psychological properties as being fundamentally stable universal and isolable They then challenge this status quo by inviting readers to recognize that dynamics context specificity interconnectedness and uncertainty are a natural and exciting part of human psychology these are not things to be avoided and feared but instead embraced This requires a shift toward a process based approach that recognizes the situated time dependent and fundamentally processual nature of psychological phenomena With complex dynamic systems as a framework this book sketches out how we might move toward a process based praxis that is more suitable and effective for understanding human functioning

The De Gruyter Handbook of Artificial Intelligence, Identity and Technology Studies Anthony Elliott, 2024-07-22 The De Gruyter Handbook of Artificial Intelligence Identity and Technology Studies examines the relationship of the social sciences to artificial intelligence surveying the various convergences and divergences between science and technology studies on the one hand and identity transformations on the other It provides representative coverage of all aspects of the AI revolution from employment to

education to military warfare impacts on public policy and governance and the future of ethics How is AI currently transforming social economic cultural and psychological processes This handbook answers these questions by looking at recent developments in supercomputing deep learning and neural networks including such topics as AI mobile technology social robotics big data and digital research It focuses especially on mechanisms of identity by defining AI as a new context for self exploration and social relations and analyzing phenomena such as race ethnicity and gender politics in human machine interfaces *Handbook of Self-Regulation, Third Edition* Kathleen D. Vohs, Roy F. Baumeister, 2017-10-13 This authoritative handbook reviews the breadth of current knowledge on the conscious and nonconscious processes by which people regulate their thoughts emotions attention behavior and impulses Individual differences in self regulatory capacities are explored as are developmental pathways The volume examines how self regulation shapes and is shaped by social relationships Failures of self regulation are also addressed in chapters on addictions overeating compulsive spending and attention deficit hyperactivity disorder Wherever possible contributors identify implications of the research for helping people enhance their self regulatory capacities and pursue desired goals *Dual-Process Theories of the Social Mind* Jeffrey W. Sherman, Bertram Gawronski, Yaacov Trope, 2014-05-09 This volume provides an authoritative synthesis of a dynamic influential area of psychological research Leading investigators address all aspects of dual process theories their core assumptions conceptual foundations and applications to a wide range of social phenomena In 38 chapters the volume addresses the pivotal role of automatic and controlled processes in attitudes and evaluation social perception thinking and reasoning self regulation and the interplay of affect cognition and motivation Current empirical and methodological developments are described Critiques of the duality approach are explored and important questions for future research identified *Psychological Studies of Science and Technology* Kieran C. O'Doherty, Lisa M. Osbeck, Ernst Schraube, Jeffery Yen, 2019-08-24 This book provides a significant contribution to scholarship on the psychology of science and the psychology of technology by showcasing a range of theory and research distinguished as psychological studies of science and technology Science and technology are central to almost all domains of human activity for which reason they are the focus of subdisciplines such as philosophy of science philosophy of technology sociology of knowledge and history of science and technology To date psychology has been marginal in this space and limited to relatively narrow epistemological orientations By explicitly embracing pluralism and an international approach this book offers new perspectives and directions for psychological contributions The book brings together leading theorists and researchers from around the world and spans scholarship across a variety of traditions that include theoretical psychology critical psychology feminist psychology and social constructionist approaches Following a historical and conceptual introduction the collection is divided into three sections Scoping a New Psychology of Science and Technology Applying Psychological Concepts to the Study of Science and Technology and Critical Perspectives on Psychology as a Science The book will interest interdisciplinary scholars who work

in the space of Science and Technology Studies and psychologists interested in the diverse human aspects of science and technology

Implicit and Explicit Mental Processes Kim Kirsner, Craig Speelman, Murray Maybery, Angela O'Brien-Malone, Mike Anderson, 2013-06-17 The need for synthesis in the domain of implicit processes was the motivation behind this book Two major questions sparked its development Is there one implicit process or processing principle or are there many Are implicit memory learning and expertise skill acquisition and automatic detection simply different facets of one general principle or process or are they distinct processes performing very different functions This book has been designed to cast light on this issue Because it is impossible to make sense of implicit processes without taking into account their explicit counterparts consideration is also given to explicit memory learning and expertise and controlled processing The chapter authors consider principles processes and models which stand above a wealth of data collected to evaluate models designed specifically to account for data from a specific paradigm or even more narrowly from a specific experimental task The motivation behind this approach is the proposition that modeling is possible for a much broader data domain even though there may be some cost where specific tasks are concerned The aim of this book is to treat synthesis as the objective and to approach this objective by collecting and discussing phenomena which although they are drawn from diverse areas of psychological science

touch a single issue concerning the distinction between explicit and implicit processes
