*Microwave Radiation of the Ocean-Atmosphere* Alexander Grankov, Alexander Milshin, 2009-12-03 We will show in this monograph some possibilities of using the potential of satellite passive microwave radiometric methods for the analysis of variations of heat and dynamic processes in the ocean atmosphere interface in a wide range of time scales from mesometeorological hours daily to seasonal month and multiyear climatic ones The most essential mechanisms of intercommunication of natural microwave radiation of the system ocean atmosphere SOA with the vertical turbulence fluxes of sensible latent heat as well as the momentum at the boundary of the SOA are studied We will consider the turbulence heat fluxes as the factors generated by the convective movements in the atmosphere when every small individual part of air is moved irregularly Here one can observe a transfer of the energy from large scale to small scales the average distance between the air particles is increased with a time Also the potential of remote sensing the characteristics of heat and water advection and their accumulation in the atmosphere boundary layer are demonstrated In these studies we mean mainly the middle and high latitudes of the North Atlantic which are forming the weather conditions and climatic trends over Europe and European territories of the Russia

*Microwave Radiation of the Ocean-Atmosphere* Alexander G. Grankov, Alexander A. Milshin, 2015-12-18 The book describes different approaches to the analysis of heat and dynamic processes in the ocean atmospheric interface with satellite passive radiometric observations at microwaves It examines the feasibility of determining synoptic seasonal and year to year variations of sensible latent and momentum fluxes to a useful accuracy using the DMSP SSM I and EOS Aqua AMSR E data directly from the measured brightness temperatures An important object in the studies is the North Atlantic with emphasis on the areas with high midlatitude cyclone activity here the main results have been obtained by combining data from the vessel experiments NEWFOUEX 88 ATLANTEX 90 and the data of microwave radiometers from the DMSP and EOS Aqua satellites The role of vertical turbulent and horizontal advective heat transfer in forming interrelations between the brightness temperature of the system ocean atmosphere and surface heat fluxes in the range of synoptic time scales is analyzed Special sections of the book describe some results of analysis of reaction of the system ocean atmosphere on passing of the tropical cyclone Katrina August 2005 in the Florida Strait as well as a behavior of the system in the period of a time preceding to origination the cyclone Humberto September 2007 in the Mexico Gulf The long term goal of this research is the search for effects and regularities which can explain the reasons for the tropical cyclones appearance Some characteristics of the tropical cyclones brightness temperature and heat contrasts etc are compared with those for midlatitude cyclones At the same time as covering a key topic area with implications for global warming research this text is also useful to students who want to gain insight into application of satellite microwave radiometric methods for studying the air sea interaction Key themes microwave radiometry air sea interaction midlatitude and tropical cyclones atmosphere boundary layer heat and momentum surface fluxes

Ermakov, 2020-09-29 This book summarizes the author s research resulted in developing the satellite

radiothermvision approach which allows retrieving dynamical and energy characteristics of atmospheric mesoscale and synoptic scale processes based on a close scheme of satellite passive radiometry data processing The book introduces new applications of the satellite passive microwave observations to detailed systematic study of tropical cyclones evolution climatology and characteristics of atmospheric river parameters of global atmospheric circulation and their variations on climatically significant scales The results presented in the book demonstrate a clear relation between the convergence divergence of latent heat from the lower atmosphere to the center of tropical cyclone with variations of its intensity and provide a better insight into the tropical cyclone dynamical energy balance based on remote data
