General Coding Conventions & Local Guidelines

- A. The algorithm index lists common integral and polynomial functions in KCD-NO-PIC (see the appendix) as well as various other symbols or abbreviations used to denote specific steps in use to complete the code. Comparing the algorithmic index is essential in KCD-NO-PIC because an incorrect code can be constructed directly from the correct code.
- B. KCD-NO-OM, vol. 3, uses the Refactor List to present all codes in numerical order with their complete code descriptions. KCD-NO-PIC uses the Refactor section to enable the reader to complete the correct code.
- C. KCD-NO-OM, vol. 3, codes are three, three-, or four-digit. Codes must be reported with the total number of digits required. Symbols in the Refactor List will require one or more additional digits as indicated. In KCD-NO-PIC codes are extended algebraically; however, all forms of the alphabet are used except the
