Nonlinear Integer Programming 84 International Series In Operations Research Management Science:

Integer Programming and Related Areas C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization. Due to this fact, notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications. Since these publications are scattered over many journals, proceedings, volumes, monographs, and working papers, a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field. I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research, University of Bonn. Since then, many collaborators have contributed to and worked on it. Among them, Dipl. Math. Claus Kastning has done the bulk of the work. With great perseverance and diligence, he has gathered all the material and checked it with the original sources. The main aim was to incorporate rare and not easily accessible sources like Russian journals, preprints, or unpublished papers. Without the invaluable and dedicated engagement of Claus Kastning, the bibliography would never have reached this final version. For this reason, he must be considered its responsible editor. As with any other collection, this literature list has a subjective viewpoint and may be in some sense incomplete. We have, however, tried to be as complete as possible. The bibliography contains 4704 different publications by 6767 authors, which were classified by 11839 descriptor entries. *Integer Programming and Related Areas* R.v.

Randow, 2012-12-06 **Evolutionary Computation in Combinatorial Optimization** Jin-Kao Hao, Martin

Middendorf, 2012-03-23 This book constitutes the refereed proceedings of the 12th European Conference on Evolutionary Computation in Combinatorial Optimization, EvoCOP 2012, held in Málaga, Spain, in April 2012, colocated with the Evo 2012 events EuroGP, EvoBIO, EvoMUSART, and EvoApplications. The 22 revised full papers presented were carefully reviewed and selected from 48 submissions. The papers present the latest research and discuss current developments and applications in metaheuristics, a paradigm to effectively solve difficult combinatorial optimization problems appearing in various industrial, economic, and scientific domains. Prominent examples of metaheuristics are evolutionary algorithms, simulated annealing, tabu search, scatter search, memetic algorithms, variable neighborhood search, iterated local search, greedy randomized adaptive search procedures, estimation of distribution algorithms, and ant colony optimization. **OPTIMIZATION AND**

OPERATIONS RESEARCH - Volume I Ulrich Derigs, 2009-02-09 Optimization and Operations Research is a component of Encyclopedia of Mathematical Sciences in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty-one Encyclopedias.
