Non Noetherian Commutative Ring Theory Mathematics And Its Applications Volume 5:

Combinatorial Number Theory and Additive Group Theory Alfred Geroldinger, Imre Ruzsa, 2009-04-15 Additive combinatorics is a relatively recent term coined to comprehend the developments of the more classical additive number theory mainly focussed on problems related to the addition of integers Some classical problems like the Waring problem on the sum of k th powers or the Goldbach conjecture are genuine examples of the original questions addressed in the area One of the features of contemporary additive combinatorics is the interplay of a great variety of mathematical techniques including combinatorics harmonic analysis convex geometry graph theory probability theory algebraic geometry or ergodic theory This book gathers the contributions of many of the leading researchers in the area and is divided into three parts The two first parts correspond to the material of the main courses delivered Additive combinatorics and non unique factorizations by Alfred Geroldinger and Sumsets and structure by Imre Z Ruzsa The third part collects the notes of most of the seminars which accompanied the main courses and which cover a reasonably large part of the methods techniques and problems of contemporary additive combinatorics

Non-Noetherian Commutative Ring Theory S.T. Chapman, Sarah Glaz, 2013-03-09 Commutative Ring Theory emerged as a distinct field of research in mathematics only at the beginning of the twentieth century It is rooted in nineteenth century major works in Number Theory and Algebraic Geometry for which it provided a useful tool for proving results From this humble origin it flourished into a field of study in its own right of an astonishing richness and interest Nowadays one has to specialize in an area of this vast field in order to be able to master its wealth of results and come up with worthwhile contributions One of the major areas of the field of Commutative Ring Theory is the study of non Noetherian rings The last ten years have seen a lively flurry of activity in this area including a large number of conferences and special sections at national and international meetings dedicated to presenting its results an abundance of articles in scientific journals and a substantial number of books capturing some of its topics This rapid growth and the occasion of the new Millennium prompted us to embark on a project aimed at presenting an overview of the recent research in the area With this in mind we invited many of the most prominent researchers in Non Noetherian Commutative Ring Theory to write expository articles representing the most recent topics of research in this area

[Progress in Commutative Algebra 2](#) Christopher Francisco, Lee C. Klingler, Sean M. Sather-Wagstaff, Janet C. Vassilev, 2012-04-26 This is the second of two volumes of a state of the art survey article collection which originates from three commutative algebra sessions at the 2009 Fall Southeastern American Mathematical Society Meeting at Florida Atlantic University The articles reach into diverse areas of commutative algebra and build a bridge between Noetherian and non Noetherian commutative algebra These volumes present current trends in two of the most active areas of commutative algebra non noetherian rings factorization ideal theory integrality and noetherian rings the local theory graded situation and interactions with combinatorics and geometry This volume contains surveys on aspects of closure operations finiteness conditions and

factorization Closure operations on ideals and modules are a bridge between noetherian and nonnoetherian commutative algebra It contains a nice guide to closure operations by Epstein but also contains an article on test ideals by Schwede and Tucker and one by Enescu which discusses the action of the Frobenius on finite dimensional vector spaces both of which are related to tight closure Finiteness properties of rings and modules or the lack of them come up in all aspects of commutative algebra However in the study of non noetherian rings it is much easier to find a ring having a finite number of prime ideals The editors have included papers by Boynton and Sather Wagstaff and by Watkins that discuss the relationship of rings with finite Krull dimension and their finite extensions Finiteness properties in commutative group rings are discussed in Glaz and Schwarz s paper And Olberding s selection presents us with constructions that produce rings whose integral closure in their field of fractions is not finitely generated The final three papers in this volume investigate factorization in a broad sense The first paper by Celikbas and Eubanks Turner discusses the partially ordered set of prime ideals of the projective line over the integers The editors have also included a paper on zero divisor graphs by Coykendall Sather Wagstaff Sheppardson and Spiroff The final paper by Chapman and Krause concerns non unique factorization

Commutative Ring Theory and Applications Marco Fontana, Salah-Eddine Kabbaj, Sylvia Wiegand, 2017-07-27 Featuring presentations from the Fourth International Conference on Commutative Algebra held in Fez Morocco this reference presents trends in the growing area of commutative algebra With contributions from nearly 50 internationally renowned researchers the book emphasizes innovative applications and connections to algebraic number theory geome

Spectral Spaces Max Dickmann, Niels Schwartz, Marcus Tressl, 2019-03-21 Spectral spaces are a class of topological spaces They are a tool linking algebraic structures in a very wide sense with geometry They were invented to give a functional representation of Boolean algebras and distributive lattices and subsequently gained great prominence as a consequence of Grothendieck s invention of schemes There are more than 1 000 research articles about spectral spaces but this is the first monograph It provides an introduction to the subject and is a unified treatment of results scattered across the literature filling in gaps and showing the connections between different results The book includes new research going beyond the existing literature answering questions that naturally arise from this comprehensive approach The authors serve graduates by starting gently with the basics For experts they lead them to the frontiers of current research making this book a valuable reference source

Rings, Polynomials, and Modules Marco Fontana, Sophie Frisch, Sarah Glaz, Francesca Tartarone, Paolo Zanardo, 2017-11-11 This volume presents a collection of articles highlighting recent developments in commutative algebra and related non commutative generalizations It also includes an extensive bibliography and lists a substantial number of open problems that point to future directions of research in the represented subfields The contributions cover areas in commutative algebra that have flourished in the last few decades and are not yet well represented in book form Highlighted topics and research methods include Noetherian and non Noetherian ring theory module theory and integer valued polynomials along with connections to

algebraic number theory algebraic geometry topology and homological algebra Most of the eighteen contributions are authored by attendees of the two conferences in commutative algebra that were held in the summer of 2016 Recent Advances in Commutative Ring and Module Theory Bressanone Italy Conference on Rings and Polynomials Graz Austria There is also a small collection of invited articles authored by experts in the area who could not attend either of the conferences Following the model of the talks given at these conferences the volume contains a number of comprehensive survey papers along with related research articles featuring recent results that have not yet been published elsewhere

Commutative Algebra Irena Peeva, 2022-02-18 This contributed volume is a follow up to the 2013 volume of the same title published in honor of noted Algebraist David Eisenbud's 65th birthday It brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry Category Theory Combinatorics Computational Algebra Homological Algebra Hyperplane Arrangements and Non commutative Algebra The book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research

Multiplicative Ideal Theory and Factorization Theory Scott Chapman, Marco Fontana, Alfred Geroldinger, Bruce Olberding, 2016-07-29 This book consists of both expository and research articles solicited from speakers at the conference entitled Arithmetic and Ideal Theory of Rings and Semigroups held September 22-26 2014 at the University of Graz Graz Austria It reflects recent trends in multiplicative ideal theory and factorization theory and brings together for the first time in one volume both commutative and non commutative perspectives on these areas which have their roots in number theory commutative algebra and algebraic geometry Topics discussed include topological aspects in ring theory Prüfer domains of integer valued polynomials and their monadic submonoids and semigroup algebras It will be of interest to practitioners of mathematics and computer science and researchers in multiplicative ideal theory factorization theory number theory and algebraic geometry

Rings, Monoids and Module Theory Ayman Badawi, Jim Coykendall, 2022-03-11 This book contains select papers on rings monoids and module theory which are presented at the 3rd International Conference on Mathematics and Statistics AUS ICMS 2020 held at the American University of Sharjah United Arab Emirates from 6-9 February 2020 This conference was held in honour of the work of the distinguished algebraist Daniel D Anderson Many participants and colleagues from around the world felt it appropriate to acknowledge his broad and sweeping contributions to research in algebra by writing an edited volume in his honor The topics covered are inevitably a cross section of the vast expansion of modern algebra The book is divided into two sections surveys and recent research developments with each section hopefully offering symbiotic utility to the reader The book contains a balanced mix of survey papers which will enable expert and non expert alike to get a good

overview of developments across a range of areas of algebra The book is expected to be of interest to both beginning graduate students and experienced researchers

Abelian Groups László Fuchs, 2015-12-12 Written by one of the subject's foremost experts this book focuses on the central developments and modern methods of the advanced theory of abelian groups while remaining accessible as an introduction and reference to the non specialist It provides a coherent source for results scattered throughout the research literature with lots of new proofs The presentation highlights major trends that have radically changed the modern character of the subject in particular the use of homological methods in the structure theory of various classes of abelian groups and the use of advanced set theoretical methods in the study of undecidability problems The treatment of the latter trend includes Shelah's seminal work on the undecidability in ZFC of Whitehead's Problem while the treatment of the former trend includes an extensive but non exhaustive study of p groups torsion free groups mixed groups and important classes of groups arising from ring theory To prepare the reader to tackle these topics the book reviews the fundamentals of abelian group theory and provides some background material from category theory set theory topology and homological algebra An abundance of exercises are included to test the reader's comprehension and to explore noteworthy extensions and related sidelines of the main topics A list of open problems and questions in each chapter invite the reader to take an active part in the subject's further development
